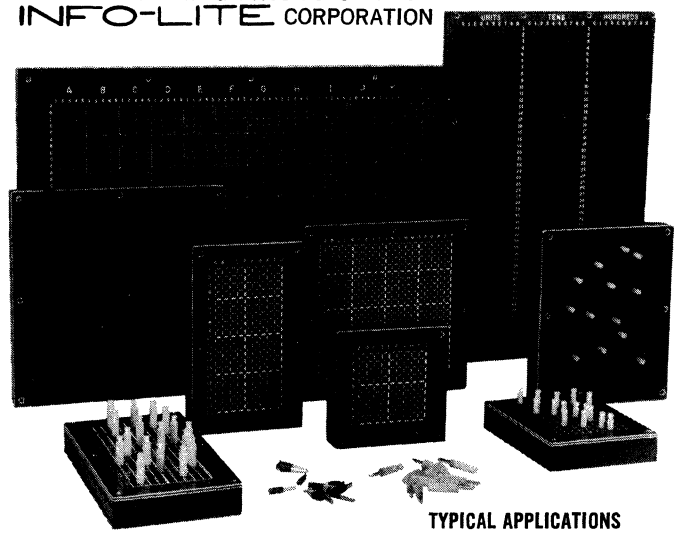
PROGRAMMING PRODUCTS

MATRIX PINBOARDS



INFO-LITE has developed a most convenient, compact and economical system for reliable programming and switching • The Matrix Program Board allows a wide variety of switching/programming functions to be performed by simply inserting programming pins (shorting or diode type) into a 2 to 10 deck contact matrix • No accessories such as "read" "write" equipment are required • Matrix Board features have led them to be favored over such devices as patchboards, card readers, toggle and thumbwheel switches, mag/punched tape and electronic memories • The two basic uses for Matrix Program Boards are: (1) Cordless patching (input-output switching), using shorting pins; (2) Programmable diode matrices (logic memories), using diode pins • Units with up to 100 x 100 crosspoints can be supplied to meet your requirements, whether for prototype or production quantities.

See Data Sheet MB3 for detailed specifications.

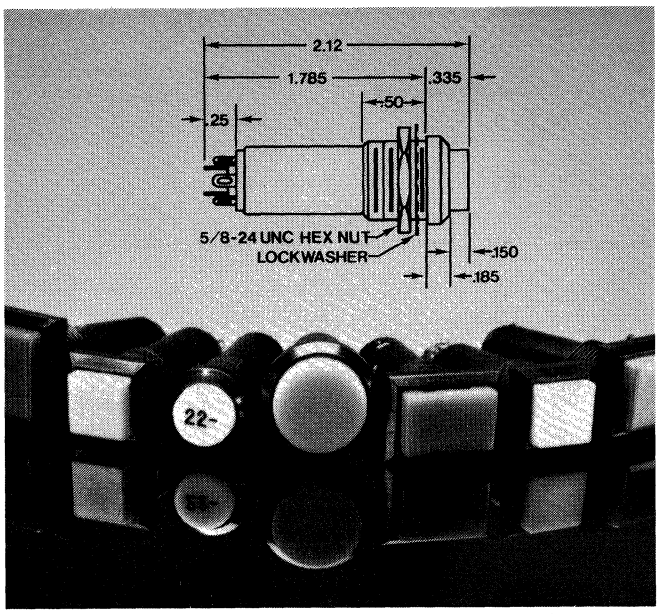
SERIES 20
A NEW CONCEPT OF FAST EASY SWITCH INSTALLATION AND DISPLAY DESIGN VERSATILITY



FEATURES:

- **Momentary or alternate action**
- **Mounts in a ⅝" dia. round hole**
- **High density mounting ability—less than ¾" centers**
- **Low profile appearance in one unitized housing**

ELECTRO-MECH's Series 20 Switches are provided in display configurations.

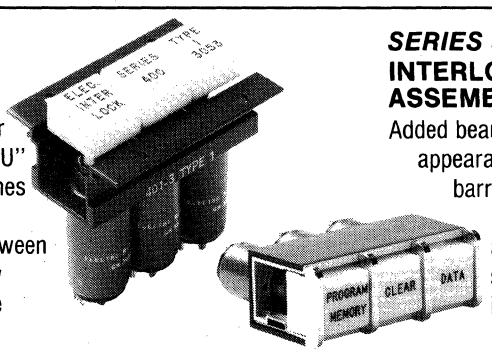
These low profile units are available in any switching mode with independent circuitry from SPST to DPDT including a separate indicator circuit. The all plastic, unitized housing assures ease in handling (no adapters, clamps or brackets). Just drop in round hole and secure with a nut from behind panel.

Series 20 Switches have the same internal parts as the all metal 6100 Series Switches including positive action, reliable circuitry and proven low bounce characteristics made possible by our unique design concept of silver slide bar action.

Available options include gold plating for dry circuit applications. Round slotted nuts for mounting switches on close centers.

SERIES 400
MULTI-STATION SUB-PANEL ASSEMBLIES

Multi-station switch assemblies designed for sub-panel mounting by means of a flanged "U" channel. All standard ELECTRO-MECH switches can be incorporated with several types of mechanical interlocking/lockout actions between stations. Up to 12 stations in one or two row configurations. The standard center distance between switches is ⅝", ¾", ⅞" and 1".



SERIES 500
INTERLOCKING SWITCH ASSEMBLIES

Added beauty and long-lasting appearance with handsome chrome barriers between each switch or indicator. Independent or interlocking action. Ten types of tracking action and switching sequences. Up to 12 switches in single or dual row, ⅞" or 1" centers.

If you are having reliability problems with your present switch, then **ELMA** has a solution for you. Our complete line of rotary, BCD, push-button, keylock, and toggle switches are among some of the best engineered switches on the market today.

Panel and PCB Mount Rotary Switches —type 01, 04, 06, 08
These switches feature high purity hard gold plated contacts up to 200 µ in. thick for long life and high corrosion resistance. With this configuration contact resistance is guaranteed to be less than 10 m Ohm after 25 thousand complete switching cycles. All shafts are made of precision ground stainless steel for corrosion resistance and impeccable appearance. Standard switches are available with up to 25 positions and 78 poles in both shorting and non shorting versions.

Push-Button, Toggle, and BCD Switches —type 07, 09
These switches are impervious to hostile environments and can be safely cleaned with most organic solvents including chlorinated or fluorinated hydrocarbons. The coded switches are available with up to 16 positions. The push button switches can be optionally back lit with LEDs.

High Security Keylock Switches —type 01, 06, 08
Our keylock switches use our rotary switches combined with ultra precision Swiss made lock mechanisms. The lock mechanisms feature five high precision tumblers for long life and extreme security. Various keys can be made for the same lock to achieve access hierarchy for added flexibility.

Miniature Mercury Tilt Switches

- **Versatile** — Available to sense, tilt, vibration or impulses for commercial, industrial or military applications
- **Reliable** — Hermetically sealed, oxygen-free atmosphere provides typical life of 250,000 operations and more
- **Rugged** — Welded metal cases
- **Wide choice** — Omnidirectional or planar
- **Precise** — Operate to tight tolerances

Notes:

1. Response speed depends on the damping fluid used, and is related to jitter reduction. Rated on a scale of 0 to 5, with 5 being heavily damped (longest response time).
2. Switches with other dampening factors are available. Consult factory.
3. Jitter is tendency for switch to change state 3° from operational point. Ranked on a scale of 0 to 5, with 5 being very susceptible to vibrations.
4. Values shown are for switch viewed so that pins are side by side. For values with pins in line (one behind the other) ask for product data sheet.

SPDT AND DPDT SLIDE SWITCHES WITH SEPARATE CIRCUITS (FIG. B)

Rating and materials are the same as the switches in Figure A. In Single Pole/Double Throw switches, each slide operates two adjacent separate circuits, opening one of them, while closing the other. (In Double Pole/Double Throw switches, 1 slide switches 4 circuits at once, opening circuits 1 and 3, while closing 2 and 4, etc.). This circuitry, used in telephone switching systems, makes these switches form, fit, and function equivalents. For true SPDT (DPDT) circuitry, adjacent terminal pairs may be tied with a printed circuit. Dot on the cover indicates the closed position of individual terminal pairs.

High Reliability Supported by Unique Technology.

Flux Scanning Method:

In spite of severe control of the sealing process, there is a slight probability that foreign matter such as magnetic particles may enter the glass. After extensive study in the detection of micro impurities, OKI has adopted the highly reliable flux scanning method. In flux scanning, external magnetism is moved so that foreign matter near the reed is forced to jump to the contact part. The contact resistance then measured is used as the standard for the selection of characteristics. We have thus succeeded in remarkably improving the reliability of reed switches by replacing conventional visual checking with the latest flux scanning method.

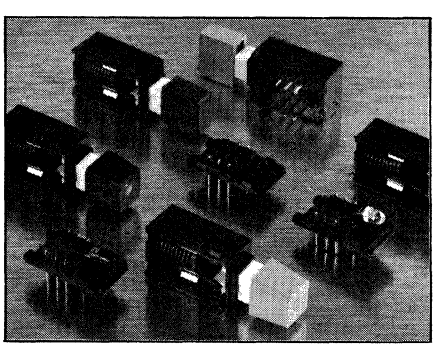
SERIES 39 MR. CLEAN

Wave Solderable Miniature Pushbutton



DESCRIPTION

Only the terminal base of this unique switch is exposed to the soldering and cleaning process. The Mr. Clean Series 39 base is compatible with fluorinated, chlorinated and aqueous cleaning methods. After the cleaning process is complete, the switch body is snapped onto the switch base for a contaminant-free, reliable switch.

Bifurcated, silver plated switch contacts provide the proven switching integrity required for logic loads. The Mr. Clean Series 39 switch has a unique wiping, self-cleaning action that maintains contact reliability.

SUBMINIATURE/MINIATURE BASIC SWITCHES

SM subminiature basic switches are a versatile collection of small size and ample electrical capacities. SX subminiature basic switches are the smallest snap-action switches available from MICRO SWITCH, yet are big in performance and selection. They provide up to 7 amp power load capacity. V3 miniature basic switches put a 25 amp power load capacity and a choice of 11 other electrical ratings into a relatively small package. V7 miniature basic switches have electrical ratings up to 15 amp power load capacity, and offer two versions—commercial and European designed to meet all leading European approval agency requirements. TB miniature basic switches are small double-break units which offer means of controlling 2, 3 or 4 isolated circuits.

STANDARD BASIC SWITCHES

Power load switching and motor handling capacity are among the attractions of thumb-size BZ/BA standard basic switches. Double-pole double-throw switching is added by DT switches.

Where there's a need for reliable switching of high capacity systems involving DC motors and solenoids, MT magnetic blow-out switches do the job. The 3MN has double-break switching.

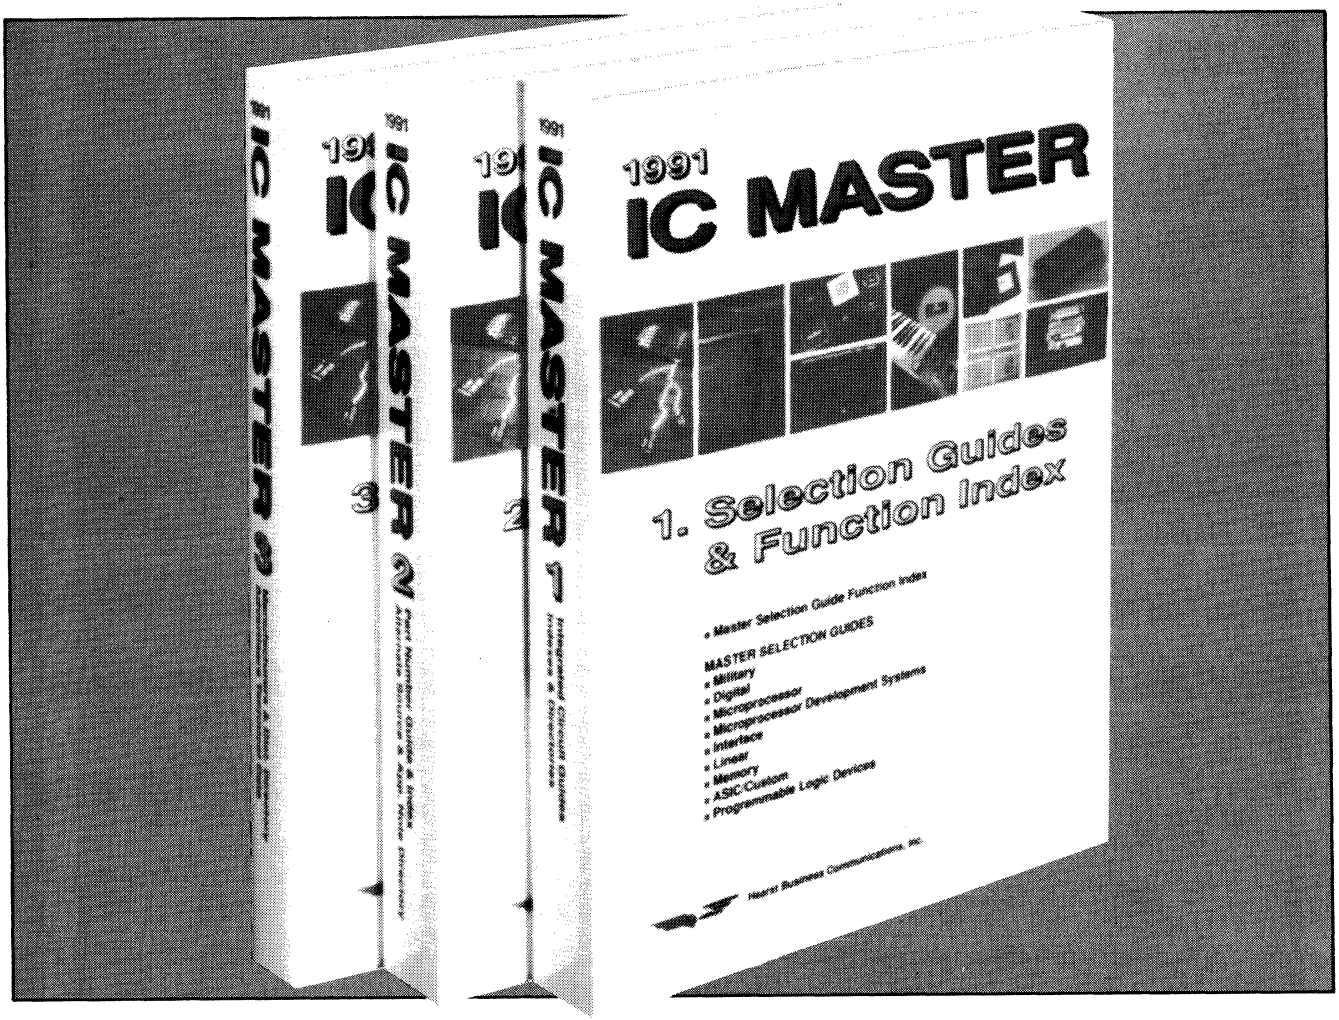
SUPER TIME SAVER!



Do you work with ICs? Do you have trouble finding the IC you need? Are you sick and tired of sifting through dozens of manufacturers' data books? Do you have trouble comparing one set of specs to another? Are you sick and tired of wasting time?

Do we have good news for you! Get your hands on the latest annual copy of the IC Master. The Master will save you both time and money. Here's how.

The Master lists every single IC you can buy. Better yet, the Master lists ICs by function. You know what you want to do. The Master tells you who makes what for what you want to do.

There's more! The Master lists every known alternate source to every integrated circuit. If somebody makes a substitute for an IC, the Master tells you. And fast!

Want to find a custom or semicustom IC? The Master tells you who the manufacturers are, what their capabilities are, and what design tools you need.

Looking for a distributor or a local sales office? The Master tells you where they are. Got a technical problem? The Master tells you who to call. Can't figure out a part number? The Master tells you how the part number systems work.

There's more! The Master has a section on microprocessor development tools with complete performance parameters. There's another section on programmable logic devices giving you everything from output configuration to PLD development systems.

Want to know if there's an application note available on a given part? The Master tells you!

If your question has anything to do with integrated circuits, you need the IC Master. Subscribe now by calling (516) 227-1314. Ask for Marie Botta. Tell Marie you need the Master now.

If you prefer, write to Marie, Hearst Business Communications, 645 Stewart Ave., Garden City, NY 11530. She'll mail you the IC Master subscription form right away.

And, if you tell her you saw it in the 1991/92 EEM, she'll take $10 off the subscription price!

1/2 INCH SUBMINIATURE ROTARY "C" SWITCH

The Shallco subminiature ½ in. diameter "C" Series combines time proven (over 30 years) internal construction i.e., rotor, stator, wiper, with a cost effective die cast operating shaft and housing.
The Shallco "C" Series switches are designed to satisfy the most demanding industrial and commercial instrumentation requirements.
Shallco offers a unique ½ inch, 3 pole, 4 position, 30° switch and a greater selection of 36° and 60° switches than any other manufacturer.
The most cost effective switch combines the die cast shaft and housing. However, brass and stainless steel shafts are available and provide the flexibility needed to meet your exact requirements without over specifying. No other manufacturer offers this service.

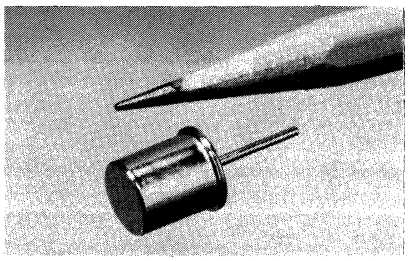
NEW! TILT-MOTION-VIBRATION SWITCHES

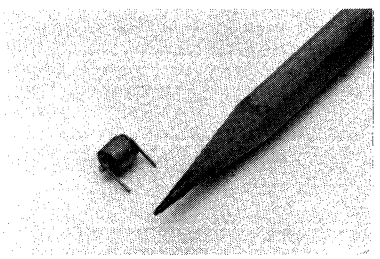
LOW COST **EASY TO USE**



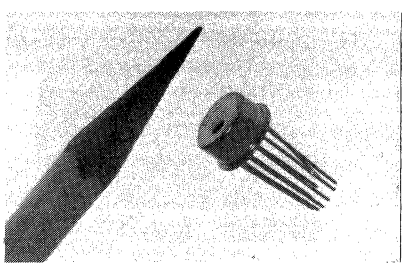
Series 2008-4

Switch has same sensitivity to vibration – motion in all positions. At rest, the SPST contacts of the series 2008-4 are always open regardless of mounting attitude. Once disturbed the contacts will momentarily close. Body length is 0.38". Diameter is 0.325".

Vibration Detector only 0.005 in³ The Series 5008-PC may be the industry's smallest vibration detection switch. No standby power required. Length is 0.19". Diameter is 0.182".



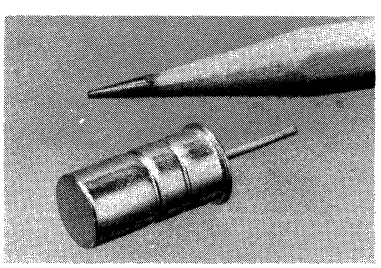
Series 5008-PC



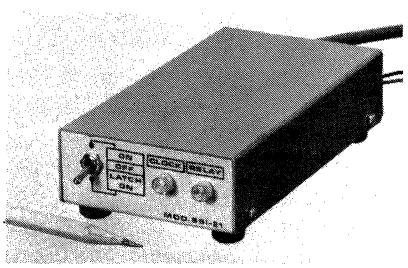
Series 2009

Who put 12 mercury contacts in that little bitty can? 12 separate contacts surround the periphery of this 0.18"H x 0.33"D, hermetically sealed switch. This versatile switch is equally adept serving as a tilt switch or as a motion and vibration sensor. The switch will not only determine the presence of tilt or vibration, but its magnitude and direction.

Crimped can gives tilt switch a 60° dead band. The series 3006-60 is designed to operate reliably in high shock environments that would normally preclude the use of a mercury tilt switch. The 60° of hysterisis also serves to eliminate repeated cycling of controlled equipment. Length is 0.66". Diameter is 0.36". Contacts rated to switch 1.0 amperes, 115 VAC.



Series 3006-60



Series 221-12

Solid state change of state latching circuit complements all mercury switches. Circuit conditions mercury contact chatter into a smooth output signal. Circuit functions from change in contact state. It works equally well with SPST-NO or NC contacts. Internal sensitivity adjustment triggers at the first or the "N"th contact pulse. Output is SPDT relay contacts. Circuit on time is fully adjustable.

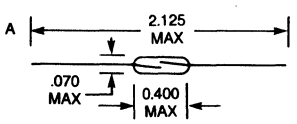
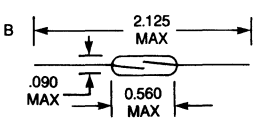
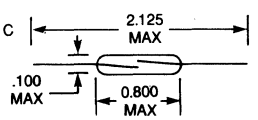
1) Contact resistance measurements are made at 10mA from a 1 volt source with 50% overdrive.

2) Storage temperature - 50°C to +155°C
Operate temperature - 40°C to +125°C

3) Consult factory for specific application assistance when using switches at or near maximum rated load. In some applications, maximum loads may be exceeded.







Contact Materials — Dry Circuit & Power Switching

Rhodium

Industry standard — recommended for general purpose applications. Low resistance, high melting point metal provides millions of trouble-free operations at low and medium loads.

Gold-Nickel Alloy

Specially developed plating and post assembly conditioning makes this alloy particularly resistant to hostile transients encountered in telecommunication circuits. Suitable for medium and high power loads.

Ruthenium

Precision controlled plating ensures contact resistance stability at low level switching over hundreds of millions of operations as required in automatic test equipment and instrumentation applications.

Detail application assistance for custom forming and proximity applications.

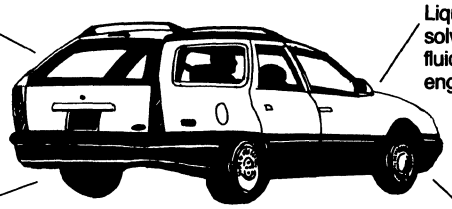
Standex Electronics designs and builds magnetic proximity sensors for a wide range of markets and applications. The basic sensing element for most applications is the hermetically sealed reed switch. Other technologies are used as the application dictates.

- ☐ Hi-Rel Switching — hermetically sealed contacts — billions of operations switching low level loads
- ☐ No External Power Required
- ☐ Power Switching — direct switching of power loads with up to 2.5 amp DC inrush
- ☐ Wide Actuation Distance — reliable actuation at up to one inch for certain applications
- ☐ Low Cost — very competitive with other technologies

RPM Sensing — cruise control, odometer, speedometer and engine control

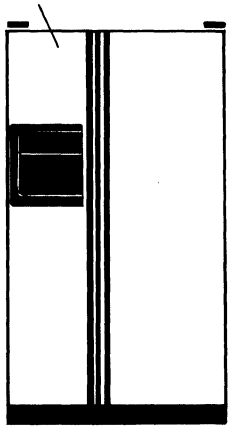
Liquid Level — washer solvent, coolant, brake fluid, transmission fluid, engine oil and fuel.

Door ajar sensing, liquid level sensing, lamp switching, dishwasher spray arm rotational sensing, and device enable applications.



Anti-skid Braking System

Lamp Outage



Off hook sensing, device disable, interlock applications, and telephone line switching.

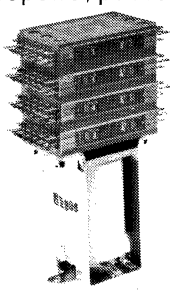
T-bar® THE SOURCE FOR MULTI-CONTACT RELAYS AND SWITCHES

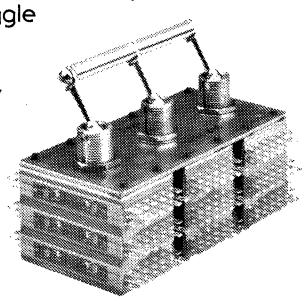
RELAYS

General purpose 800-series, with contact ratings to 5A, and 900-series with low-level to 1A ratings. Both available with 12, 24, 36, 48, and 52 poles in form A (N.O.), form B (N.C.), and form C (D.T.) and 60 poles, form A. Operation from continuous ac or dc power, pulsed power (latching), or solid-state logic. Environmentally sealed and hermetically sealed relays for aerospace, shipboard and ground support hostile environments are available.



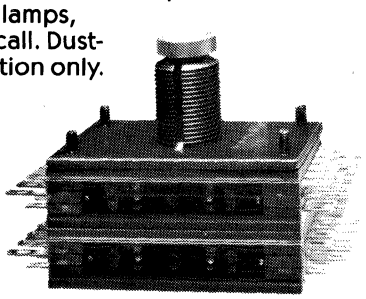
TOGGLE SWITCHES

Same 800-series and 900-series as relays. Available with 12 to 144 poles in form C, maintained action. Typical life in excess of 50,000 operations. Normally dust-tight, T-Bar toggle switches are also available in an environmentally sealed version.



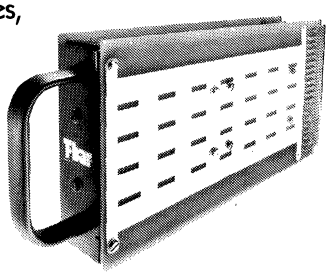
PUSHBUTTON SWITCHES

Momentary pushbutton switches, 800-series only are available with 12 to 36 poles, form C. Typical applications include press-to-test for control panel lamps, reset, and all-call. Dust-tight construction only.



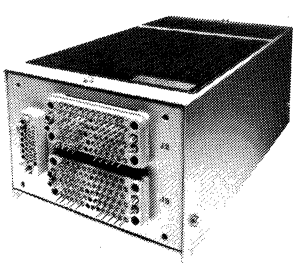
PLUGGABLE MODULES

Pluggable modules use standard T-Bar multi-contact relays in either a one relay configuration or two relays independently controlled with no common failure mode. Plugged into T-Bar printed circuit card cages, any desired switching configuration can be established by backplane wiring.



SELECTOR UNITS

Standard T-Bar relays, 800 or 900-series, are packaged as an automatic selector unit to random or sequential circuit selection and addressed through binary weighted coils. Available as Treeselect (all unaddressed lines remain open) or Norselect (all unaddressed lines connected to a bus), selector units can be provided with 16 to 128 positions.



CONNECTORS

T-Bar plug-on connectors are available for all relays and switches. Each connector provides wiring to one-half of a wafer deck (6 poles; A, B, or C). A 36-pole device, for example, requires 6 connectors. Two connector versions are available. One accommodates individual wiring with crimp-on connectors; the other is used to mass-terminate ribbon cable.

ICMASD...IC Alternate Source Directory

The all new 1991 version of the world famous Alternate Source Directory is now available in floppy disk form for your IBM XT & AT and 100% compatible personal computer with hard drive.

The **1991 ICMASD** contains the more than 180,000 listings that appear in the Alternate Source Directory Section contained in Volume Two of the printed version of the 1991 IC Master ...plus additional discontinued parts. The database includes complete vendor addresses and phone numbers.

You can personalize the **ICMASD** for your application. The program allows you to add comments, up to 20 digits long, to each listing. These comments can be part numbers, prices, or any information specific to your needs. You may also add, delete and/or discontinue devices!

For greater flexibility the base number search feature enables you to access parts by base number, i.e., the device number stripped of prefixes and suffixes. You don't need to know the manufactures codes to call up any of the alternates to these devices.

The **1991 ICMASD** is fast, convenient and very user friendly!

Complete program documentation is included. When ordering, be sure to specify if you want the **1991 ICMASD** on three, double-sided, double-density disks OR on one high-density disk.

For immediate delivery you can order the **1991 ICMASD** at $179.50* simply by charging your Visa or MasterCard credit card. To place your order or for more information, call or write:

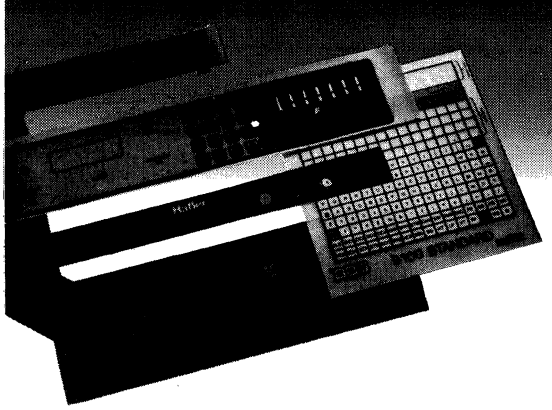
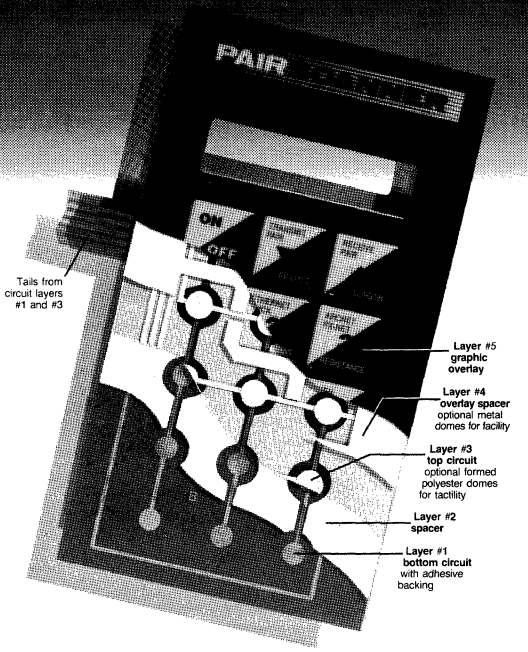
WITH A LEADER IN MEMBRANE SWITCH TECHNOLOGY





OEMs Take Note. Increased efficiency and reduced cost is a performance fact when membrane switches, decorative overlays and flex circuits are put to work.

Reliably Simple Membrane Switches

Membrane Switches meet tight schedules by shortening development times. One piece construction controls costs. The Lexan™ finish offers many texture options. Colors appear more saturated and vibrant. Sealed surfaces prevent blunders from botching systems. Second-surface printing stands up to scratches and wear.

Decorative Overlays a Marketable Presence

Decorative Overlays ensure enduring quality. Richness and luster remain intact under heavy use. Affix to practically any surface: glass, metal, plastic, wood, etc. Updates achieved without system redesign.

Flex Circuits Reduce Space Problems

Flex Circuits fold or flex to a product's available space. Reduced tooling accelerates production and puts a halt to cost overruns. Virtually no moving parts to wear out. Smooth, flat surfaces clean easily. Works in tangent with Membrane Switches or stands alone.

LEXAN™ IS A TRADEMARK OF GENERAL ELECTRIC CORPORATION

MATERIAL

Polyester (standard thickness .007 in.) The preferred choice for long life and chemical resistance. Polyester is available in a variety of hardcoat textures and finishes.

Polycarbonate (standard thickness .007 and .010 inches) available with mechanical velvet texture.

HARDCOATS

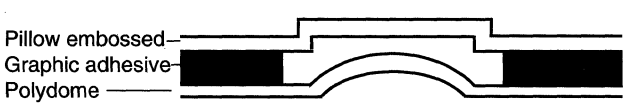
Gloss, semi-gloss and matte finishes are available on polyester and polycarbonate to help reduce scratching and increase chemical resistance. Some of the finishes can be selectively applied to create display windows and decorative finishes.

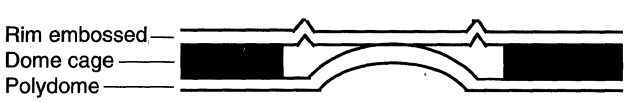
COLORS

Colors for your membrane switch are selected from the Standard Pantone Matching System or we will match your custom color chip. Transparent and translucent colors are available for backlighting and window areas. Deadfront is also available in certain applications where legends or LED windows remain hidden until a light shines from behind it.

EMBOSSING

Standard graphic embossing styles are pillow embossing, generally used over polydomes and rim embossing for locating pads by feel.





SWITCH TYPE

The most economical switch type is the screened silver circuit, for switching loads under 1 watt. A printed circuit board construction with copper circuitry can be used when switching loads are 1 watt or more and when temperatures are too high for polydomes or if other components such as LED's and displays are included in the assembly.

SHIELDS

For ESD protection a screened silver grid is applied to the top side of the silver circuit. Aluminum and gold vapor deposition can also be used for ESD, EMI and RFI protection.

SPACERS

When the environment is not a problem pressure sensitive adhesives are commonly used. Bergquist HEATSEAL is recommended when moisture, spills, vapor and other extreme conditions are expected.

CONNECTOR

Many types and styles of connectors can be designed into your membrane switch. Screened silver switches are available with female and male connectors and with solder pins. PC board connectors are available with a wide variety of connectors including single and double row headers, shrouded headers and flat cable connectors.

TACTILE FEEL

Polydomes are available on silver circuits and as shunts on the PC board. They provide tactile feel and long life. On nickel plated copper or PC boards stainless steel snap domes are used where tactile feel is needed and when temperatures are higher than 150°F.

RELIABLE, EXTENDED LIFE: Our full-travel keyboards use our patented capacitance keyswitches which have a rated life of 100 million cycles. We use double-shot legended keycaps and rigid FR4 printed circuit boards to provide the component reliability required to remain compatible with our 100 million lifecycle capacitance switches.

ENVIRONMENTALLY QUALIFIED: We provide keyboards for the widest of temperature ranges. All of our full travel, capacitance keyboards include our PF-SHIELD: a thermoplastic film that provides environmental protection against dust, liquid spills, water spray, industrial solvents and most laboratory solutions. To maintain the professional image of your equipment, PF-SHIELD is "hidden" underneath your enclosure or front panel, eliminating unsightly plastic, rubber or membrane keyboard overlays.

CUSTOM LAYOUTS: We offer custom layouts from 2 to 400 key positions. Our keyboards can be open frame to mount directly in the host system, or we can provide metal and plastic enclosures for standalone keyboards. In addition, any combination of standard or custom legends, keycap colors and clear plastic, relegendable keycaps may be selected to meet the specific application.

SUBSYSTEM ENGINEERING & MANUFACTURING

In addition to keyboards, XCEL Corporation offers the design, manufacturing and integration of electronic data input and display devices into complete subsystems. We design and manufacture data input devices using our patented capacitance switch technology, as well as membrane, conductive rubber, and snap dome switch technologies. IEE PPD
MILITARY PRODUCTS GROUP

Keypads, Keyboards, Switches & Displays

IEE Planar Products Division, Military Products Group specializes in standard and custom keypads, keyboards, displays, front panel assemblies and control display units for both military and industrial applications.

Keyboards and Keypads
PPD designs and manufactures a variety of keyboards and keypads. They incorporate such features as gold-plated snap domes or carbon contacts, illuminated (MIL-P-7788) or nonilluminated keys, EMI/RFI shielding, environmental sealing and low-profile bezels. Keypads are also molded of silicone and other specially compounded elastomers. Together, these products comprise one of the most comprehensive high reliability keyboard and keypad selections available.

Full-Travel Military Keyboard
PPD designs and manufactures a unique Full-Travel Military Keyboard (FTMK™) to the most exacting military specifications. A full-travel stroke (similar to standard data-entry PC keyboards) is provided while meeting severe operational specifications such as TEMPEST, nuclear hardening, 3-foot submersion, shock, vibration and wide-temperature (MIL-Std-810). A tactile "snap" is also offered as an optional feature as well as a wide selection of standard and custom interfaces.

The modular configuration of the individual FTMK key positions permits the ready design and manufacture of custom keyboards.

Rear-Projection Readouts
PPD designs and manufactures rear-projection readouts which display up to 48 discrete custom legends and/or graphics in color in an area as small as .37 square inches. These displays are available with or without an interactive touch switch feature. Rear-projection readouts are currently being used in a variety of applications from automotive instrumentation to Trident submarine sonar systems.

Displays
PPD designs and manufactures full military and ruggedized thin film electroluminescent (TFEL) flat panel displays with or without interactive touch switch capabilities. These rugged, low-power EL displays are currently available in 3"×5" and 4"×8" configurations. A variety of interfaces are available, and the displays are provided complete with power supplies, and optical filters.

In addition to the above, PPD also designs and manufactures full military custom LCD, VF, LED and DC Plasma displays.

Front Panel Assemblies and CDUs
PPD's custom engineering capabilities include the design and manufacture of front panel assemblies and handheld, portable and desktop control display units (CDU). These custom assemblies integrate our standard and custom keyboards and displays into environmentally rugged man-machine interface devices that meet the most rigid military specifications. PPD also produces ruggedized assemblies to meet severe industrial requirements.

Contracts and Program Coordination
To ensure meeting contractual and schedule commitments, PPD maintains a Contracts and Program Coordination group dedicated to closely monitoring the progress of in-house programs and serving as the primary liaison with PPD customers for work-in-progress.

Quality
PPD Military Products Group maintains a MIL-Q-9858 quality program and high reliability solder process controls to Weapon Standard WS6536 specification levels. PPD is committed to high-quality standards in attitude, workmanship and final products.

CONSTRUCTION

GRAPHIC OVERLAY Subsurface printed polyester. No limit to perfectly matched colors. Surface protected from chemical attack and abrasion with hard coat finishes. Can include transparent, deadfront or colored display windows; selective texturing; embossed, die-cut and/or relegendable areas.

SWITCH Normally open, single pole, single throw momentary contact device, activated by light, direct pressure. Standard encoding xy or common bus.

MEMBRANE Layers of thin, flexible film (printed circuit patterns, insulators and spacers), die cut and laminated with high strength adhesive to form low profile switches. Can be installed to a subpanel, complete with mounting hardware, or fit within a bezel or housing. **Non Tactile** Conductive patterns are printed on the facing, inner surfaces of the two outermost layers, separated, except at the contact pad, by a spacer. **Tactile** Substitutes metal domes (or polyester dome layer) for the top circuitry, as a shorting pad.

PCB Similar to membrane construction, but meets broader electrical requirements and permits board mounted components. Substitutes a PCB for the bottom membrane layer, forming its own subpanel. **Accessory PCB** used to mount components and for accessory circuitry. Mounts directly below the PCB key panel using standoffs.

ELASTOMERIC KEYPAD Used over a membrane or PCB construction. For extended switch life, uses silicon rubber/carbon pills (over a PCB) as the shorting device. Sealed construction ideal for harsh environments. Silent feedback available in progressive feel or positive snap. Under a **plastic keytop,** snap-action metal domes also can be used.

EMI & ESD SHIELDING (optional) Printed or fabricated from copper, aluminum or other alloys.

TERMINATION Unterminated (with terminal pads), solder tabs, male/female connectors; PCB headers or terminal pads.

TRANSPARENT MEMBRANE TOUCH SCREENS xy or analog coding. Construction details and specifications sent by FAX or mail- CALL 206-284-5475

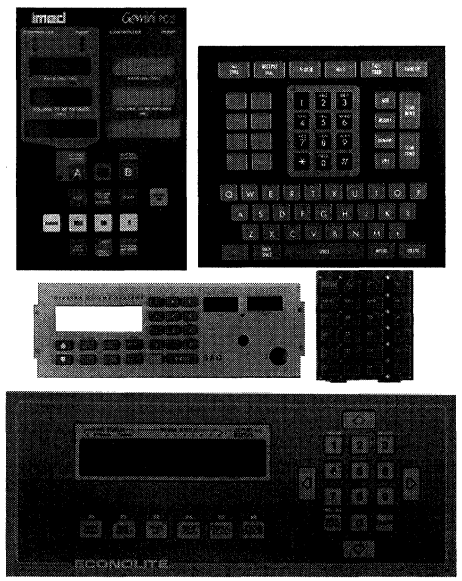
JAYCO

MEMBRANE SWITCHES
HYBRID SWITCH ASSEMBLIES
LEADERS IN FRONT



Jayco specializes in front panel switches & sub-assemblies. Our products are consistently chosen by hardware designers for their performance, superior standards, and visual appeal.

MEETING YOUR NEEDS

Customer satisfaction is our primary business concern. Our unique approach to customer satisfaction guarantees product reliability. At Jayco, quality begins with a complete analysis and planning of your machine interface requirements, before any material selection, design or construction methods are determined.

Our pre-engineering design reviews, testing and inspection to MIL-I-45208A insures that all processes and procedures are in place to anticipate and prevent any and all manufacturing problems. To further maximize customer benefits, Jayco maintains a policy of open communication throughout the design, engineering and manufacturing cycle, as a priority and a critical link in our system. Jayco breaks through the traditional customer–vendor relationships and enters into customer–supplier partnerships where together, we become committed to perfecting your project.

MEMBRANE SWITCHES

Our reliable membranes are thin, light weight, space saving and have a low assembly cost making them ideal for medical devices, process control, test and measurement, diagnostic, telecommunications, security, hand held equipment, and other applications. Membrane Switches are simple to use, offer design flexibility, and they are rugged and durable. They facilitate easy design integration to include displays, bargraphs, CRT windows, and speaker grilles. Many options are also available. (see design options).

HYBRID SWITCH ASSEMBLIES

Hybrid's are a combination of membranes and PCB technology built onto circuit boards. HSA's have the design advantages of membranes and are versatile enough for most applications. In addition, hybrid switch assemblies are a rigid assembly allowing component integration and conventional mounting without separate backplates. HSA's often eliminate another PCB from your product because display components and related circuitry are mounted to the same board used for the switch circuitry. Complete, fully tested sub-assemblies save you money. You have fewer components to order and track, lower assembly costs, and Jayco completes all of the testing for you.

SILICONE RUBBER KEYPADS AND ASSEMBLIES

The ideal choice for applications when a sensitive tactile feedback is required. Silicone keypads can be conductive or non-conductive, with integral or separate keytops, supplied as components or built into membrane or hybrid switch assemblies to produce a totally integrated front panel. Our sub-assemblies include keypads, PCB's, bezels, overlays, displays and other electronic components. This is an excellent money and labor saving alternative to building your own assembly with different components from multiple vendors.

Tailored to your requirements, Jayco's SRK's are molded in a wide variety of operating forces and switch travels. Select SRK's for any design application where positive feedback, low user fatigue, low cost and high reliability are prime requirements. SRK benefits also include: Long life (durability); excellent thermal stability and chemical resistance, light weight, low assembly cost, design flexibility, ESD protection and multi color arrays.

KEYBOARDS AND KEYPADS

Jayco manufactures custom keyboards and pads to your precise design requirements. These switches have few limitations regarding size, layout, number of switches, circuitry or graphic design. Custom keypads eliminate the compromise of off the shelf components which more than offsets the tooling costs in many applications.

DESIGN OPTIONS

EMBOSSING

Jayco embosses all overlays in-house. Proprietary techniques provide exceptional results, lower tooling costs, and a perfect match between printing and embossing. Any part of the front panel can be embossed to add a third dimension.

Embossing is usually pad or rim type. With pad embossing, the entire switch area is raised like a top hat. Rim embossing raises the outline of the switch like a crater. Rim and padding can be combined for special effects.

Pad embossing gives a more conventional keyboard appearance and is generally used with tactile switches. Rim

SILICONE RUBBER KEYPADS
KEYBOARDS AND KEYPADS
PANEL TECHNOLOGY

JAYCO

embossing assures better switch location, vital in non-tactile applications.

TACTILE FEEDBACK

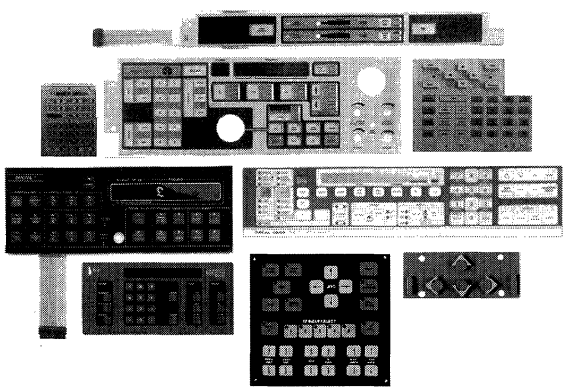
Tactile feedback is the snap action felt at switch closure and is achieved by the oil can effect of a stainless steel or polyester dome. Positive feedback of closure is important in applications utilizing unskilled operators or where other forms of feedback are impractical.

Jayco's tease-resistant tactile feedback mechanisms guarantee simultaneous contact and snap with both metal and plastic dome systems.

Metal (stainless steel) domes offer greater consistency of operation and reliability. Plastic (polyester) domes are more economical and make tactile feedback a practical feature for low cost applications.

SHIELDING

Jayco gives you the option to specify panels with EMI/RFI or ESD shielding. For maximum protection, the shielding is applied between the overlay and the switch layer. Shielding materials include metalized polyester, transparent ITO for windows and printed thick film.



SELECTIVE TEXTURES

Textures are used to optimize display visibility and legend clarity, selective (multi) textures allow the use of optically clear, anti-glare and matt texture coatings on Jayco panels. This technique is also used for aesthetic reasons. An added benefit is that Jayco's hard-coated textures typically have significantly better chemical and scratch resistance than the base materials.

INSERTABLE LEGENDS

Jayco responds to your visual needs with easy to change legends and graphics. An ideal feature for user definable keys, different model options, foreign language versions or prototyping.

INTEGRATED DISPLAYS

Through proprietary processes, Jayco offers one piece or laminated display windows for almost any kind of display device. With windows that are transparent or filtered. Standard filters are available in red, green or gray, with other colors available upon request.

In addition, fully interactive front panels can be made combining thin film LCD's and membrane switches in an assembly less than 0.060" thick. Call Jayco for more details.

DEADFRONT PANELS

Jayco's deadfront panel makes a complex instrument easier to use and the displays more effective.

Deadfront or secret-til-lit panels are invisible or blank until their displays are lit from behind. This effect is typically used for warning displays, or where strong impact of the hidden message is required.

CONSTRUCTION & FINISHING

DIE CUTTING

Low Key utilizes laser cut steel rule dies. Steel rule die cutting is carried out on all components of the keyboard. Typical tolerance levels of a steel rule die is generally ±0.010 for overall dimensions, and less for die cut holes, key ways, cut outs, and rounded corners.

EMBOSSING

Embossing of the keypad areas on membrane switch overlays is offered by Low Key, to accent key switch areas and to enhance tactile response. Embossed areas can raise circular, square, or rectangular keys more than 0.030 inches above the overlay surface.

TERMINATIONS

Low Key membrane keyboards are most commonly terminated with Dupont/Berg insulation displacement connectors. Common to all flat and flexible circuit connectors, the clincher assembly mates to 0.025 inch pins or headers on a 0.100 center to form a complete interconnection system. Low Key offers other types of interconnect systems in varying configurations and geometry.

SNAPDOMES

Low Key metal snap action domes provide positive feedback over a wide spectrum of operational conditions. Dome sizes range from 0.50 inches in diameter and smaller. Domes are fabricated from a passivated stainless steel spring material. Electrical contact is made when a snap dome is given sufficient finger pressure, causing the dome to snap over into a flattened shape. This forces the dimple to bring the top and bottom circuits into contact with each other. Snap domes are not in intimate contact with the circuit.

Typical specifications on Low Key tactile domes are:

Operational M.T.B.F.	1.0 million
Total Travel	0.015 max.
Pretravel	0.008
Overtravel Nominal	0.007
Trip Travel at Make Point gm	250 gm ±4
Tactile Range	medium

L.E.D.'S

If densities are shrinking, combine size efficient surface mounted L.E.D.'s within your next membrane switch design. Low Key's construction techniques provide unlimited SMD arrays at no increase in assembly thickness, typically 0.035″ to 0.042″.

ELECTROLUMNESCENT PANELS

The durable thin film of the EL panel offers long life, uniform lighting. They are individually addressable, and add as little as 0.011″ to your assembly.

Capacitance	.0035 ufd/in²
Phase Angle	Up to 75 degrees leading
Frequency	60-400 Hz
Voltage	115 AC

UNIVERSAL MEMBRANE SWITCH/KEYPAD . . . . . .ENCODER. . . . . .

Low Key offers the USE-144 micro-processor based encoder with its custom membrane switch and keyboard products. The USE-144 is software configurable, detecting and encoding up to 144 keys in matrices up to 12 x 12. Selectable output data provides either, PCXT/AT format or in RS232/432 formats. The USE-144 is powered from a single + 5v power supply. No + / − 12v supply is required even for true RS-232 signals. The encoder is uniquely size efficient 1.500″ x 3.500″ x 0.500″ and is easily mounted to the back of your custom membrane switch/keyboard. Complete technical data is available upon request.

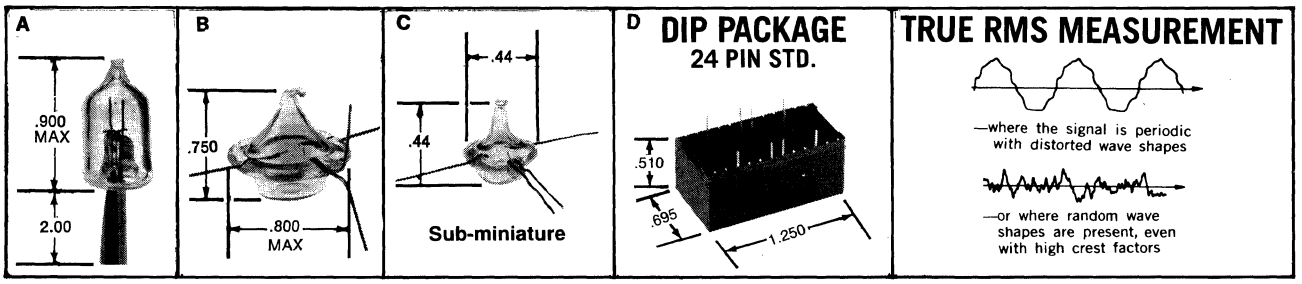
VACUUM THERMAL CONVERTERS



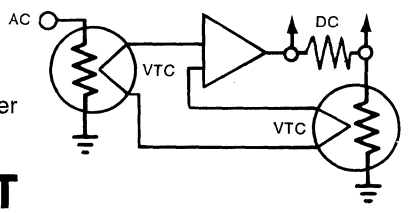
Vacuum Thermal Converters (VTC) provide a simple solution to a difficult design problem. That problem is, economically measuring the true RMS value of a current independently of waveform and frequency.

While VTCs have been in existence for many years, their work is often not understood. The basic structure looks like a simple incandescent light bulb. The outer shell is clear glass. There is a near total vacuum inside. The active elements are a heater wire with a thermocouple suspended at midpoint.

Current flows through the heater wire and the thermocouple measures the temperature at midpoint. This midpoint temperature is proportional to the true RMS current through the heater wire. The ability to calibrate at DC and measure AC accurately is inherent.

Operating range is from 0 to 65 MHz for standard pattern models, up to 300 MHz for UHF pattern and up to 1 GHz for miniature UHF pattern models. Sub-miniature models are supplied in a low profile glass shell.

D package will house one or two sub-miniature units. Ideal for T.C. Control, Spare or Matched Pairs.



Typical application.
RMS — DC Converter
Using two VTCs

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

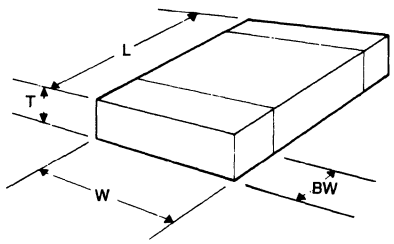
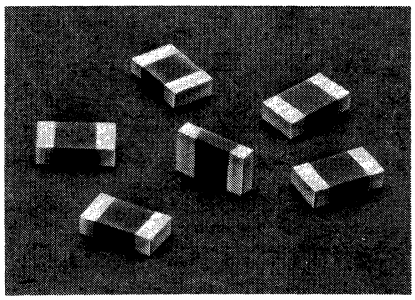
SURFACE MOUNTED
HYBRID CHIP THERMISTORS

J Thermistors – Hybrid Chip

FEATURES

- Wraparound terminations
- Allows design flexibility for use with hybrid circuitry
- High-density monolithic ceramic construction
- Available in 8mm tape and reel





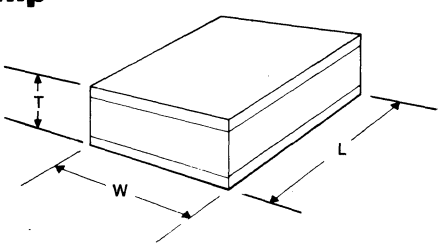
J Style chips are thermistor dies with wraparound terminations for mounting directly to the bonding pads of a hybrid substrate. The use of low temperature 2% to 5% silver bearing solder paste, or a suitable conductive epoxy is suggested for mounting.

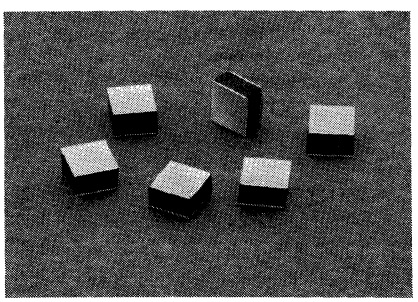
Style J = Platinum Palladium Silver

W Style Thermistors – Chip

FEATURES

- Top and bottom surface terminations
- High-density monolithic ceramic construction
- Allows design flexibility for use with hybrid circuitry





W style is a thermistor die with silver conductors fired on the top and bottom surfaces. The bottom surface can be reflow soldered or conductive epoxied directly to a substrate bonding pad, and the top surface wire bonded to complete the circuit connection.

W STYLE ±10%, ±5% R_{25} tolerance Value range is 50Ω to 1Meg Ω

"SOFT START"
INRUSH CURRENT SUPPRESSING DEVICES

"Soft-Start" devices display relatively high resistance to starting currents in a variety of electronic circuits. Having a negative temperature coefficient of resistance, these devices exhibit a large decrease in resistance when an AC or DC current is applied.

Unlike circuit breakers and fuses, "Soft-Starts" prevent dangerous, short-duration, peak inrush currents present at turn-on. Especiallly useful in power supplies where charging capacitors initially present extrememly low impedance, "Soft-Starts" actually limit inrush currents thereby extending the life of other critical components.

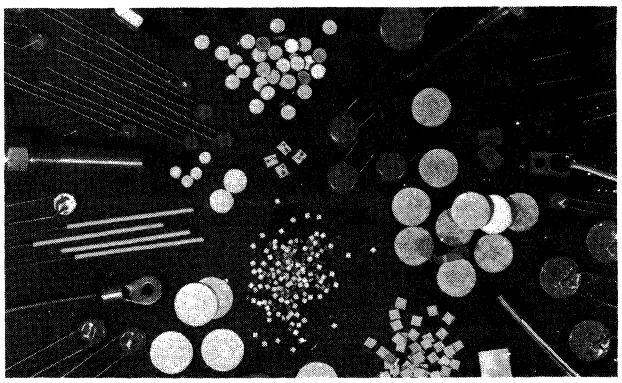
INTRODUCTION

Thermistors are temperature sensitive passive semiconductors which exhibit a large change in electrical resistance when subjected to a relatively minute change in body temperature. Negative temperature coefficient (NTC) thermistors decrease in resistance when subjected to an increase in body temperature. Conversely positive temperature coefficient thermistors (PTC) increase in resistance when subjected to an increase in body temperature. Ketema-Rodan Division manufactures NTC thermistors as well as two basic types of PTC thermistors. The silicon PTC offers a nearly linear positive temperature coefficient of approximately +.7%°/C and the switching PTC thermistor which exhibits a very large increase in resistance (several powers of 10) over a designated temperature range. Their extreme sensitivity to minute temperature changes enables them to perform many unique functions heretofore impossible with standard electronic components.



NEGATIVE TEMPERATURE COEFFICIENT THERMISTORS

The NTC devices are available in resistance values from less than 1 ohm to 1 megohm, and in sizes ranging from 0.010 inch cubes to 1 inch diameter discs. Available configurations include: discs, chips, rods, bars, probes, and resistor/thermistor networks. Units can be molded, dip coated, or encapsulated to your specifications, using packaging materials such as epoxy, glass, or high temperature silicon resin.

SURGE-GARD™ INRUSH CURRENT LIMITING DEVICES

DESCRIPTION

Rodan® SURGE-GARD devices are manufactured of a specially-formulated metal oxide ceramic material which is capable of suppressing high inrush current surges. They are especially useful in power supplies (See Fig A) where, due to the extremely low impedance of the capacitor being charged, the bridge is subjected to an exceedingly high current surge at turn-on. The SURGE-GARD, being of relatively high resistance, limits the current for 1 to 2 seconds during which time the device decreases in resistance substantially to a point where its voltage drop is negligible.

1 Other resistance values available upon request.

2 I_{max} = The maximum steady state DC or RMS AC current.

3 * RI_{max} = The approximate resistance under maximum steady state current conditions.

4 **Max Operating Temp** = All Rodan Surge-Gard devices are rated for operation to a maximum ambient temperature of 65°C. If your application requires operation above 65°C ambient, please consult Rodan's applications engineering department.

5 **Recovery Time** = Since Rodan Surge-Gards self-heat due to current flow, which in turn causes a reduction in their resistance, the devices require cool-down time after power is removed. The cool-down time allows the resistance to increase sufficiently to provide the required inrush current limiting. This time varies with the particular device, mounting method and ambient temperature. Usually, a one minute cool-down period is adequate. Selection of capacitor bleeder resistors which will provide a one minute or so bleed down time can eliminate the cool down time requirement.

APPLICATIONS

If the resistance of one Surge-Gard does not provide sufficient inrush current limiting for your application, two or more may be used in series or in separate legs of the supply circuit. Surge-Gards cannot be used in parallel since one unit will tend to conduct nearly all the current available. Surge-Gards may be used in the AC (Point A or B) or the DC (Point C or D) locations in the circuit.

SILICON PTC THERMISTORS

DESCRIPTION

The positive temperature coefficient of resistance is very large: approximately 0.7%/°C, making these units ideal for use in temperature-compensating and sensing applications. Just a few such applications include amplifiers, power supplies, transducers, telemetry, computers, magnetic amplifiers, thermometry, meteorology, temperature regulation and overtemperature protection. Lead material other than standard, such as weldable nickel or gold plated, is available on request.

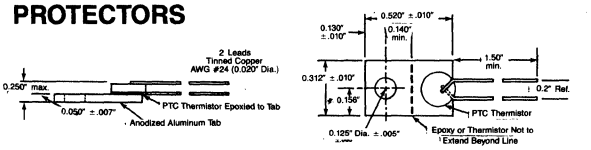
PTC SURFACE MOUNT OVERTEMPERATURE PROTECTORS



OVER CURRENT PROTECTORS

The PTC over current protector is connected in series with the load which is to be protected. During normal operating conditions, the PTC remains in its low resistance state resulting in negligible attenuation to current flow. When a short circuit or over-current condition occurs, the PTC will switch into its high resistance state thereby limiting the current flow in the circuit to a point well below the normal operating level. When the fault condition is removed, the PTC will return to its low resistance state allowing the current flow to recover to its normal level. Ketema-Rodan Division produces over-current protectors for a whole range of load protection applications.

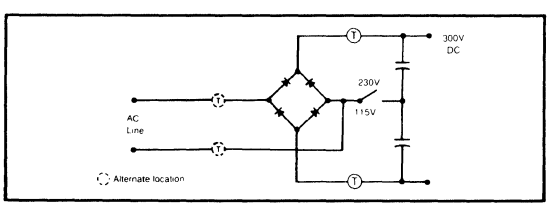
INRUSH CURRENT LIMITERS



The circuit diagram above displays a typical way to limit inrush current.

Protection against extremely high peak inrush current, especially in AC/DC switching power supplies, is now available with Keystone Inrush Current Limiters. These special NTC thermistors effectively control surge currents because the thermal time constant of the current limiter is longer than the electrical time constant (RC) of the thermistor and the capacitor.

All inrush current limiters are insulated with a protective coating.

GLASS ENCAPSULATED THERMISTORS

Keystone glass encapsulated NTC thermistors are tiny pellets of thermistor material hermetically sealed in glass bodies with a controlled amount of selected atmosphere. The hermetic seal makes these parts extremely stable in applications up to 204°C (400°F).

PTC SURFACE-MOUNT OVERTEMPERATURE PROTECTORS

Positive Temperature Coefficient (PTC) thermistors — act as solid-state switches. A typical application of these surface mount units is to prevent destruction of a power transistor.

The PTC Sensor is mechanically mounted to the power transistor package. The PTC thermistor measures the surface temperature of the transistor. When the temperature of the transistor case reaches a critical point, the PTC switches and turns off the drive circuitry for the transistor. This action prevents its destruction. Then, as the transistor cools, so does the thermistor, automatically resetting itself to once again guard the power transistor.

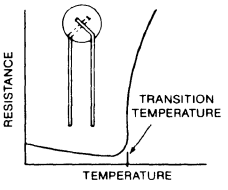
PTC — POSITIVE TEMPERATURE COEFFICIENT THERMISTORS



Positive Temperature Coefficient (PTC) thermistors are characterized by an extremely large resistance change in a small temperature span. The figure at left depicts a generalized resistance temperature plot for a PTC. The temperature at which the resistance begins to increase rapidly is referred to as the transition temperature. This point can be changed from below 0° C to above 160° C.

TYPICAL PTC APPLICATIONS

• Automatic Color TV Degaussing • Air Flow Measurement • Non-Destructive Fuse • Single Phase Motor Starting • Liquid Level Sensing • Combination Heater-Thermostat • Arc Suppression • Time Delay Fusing.

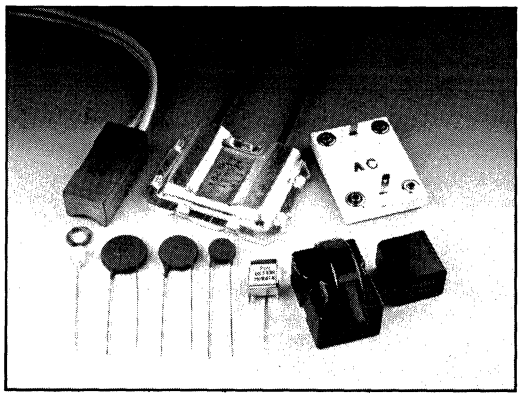
posistor® positive temperature coefficient thermistors

MURATA ERIE NORTH AMERICA

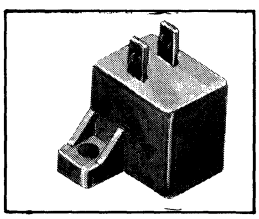


Murata Erie Posistors are basically positive temperature coefficient thermistors with a very well defined resistance-temperature "knee" and the unique ability to "switch" relatively large amounts of power. They may also be used as self-regulating heating devices at useful power levels and as control devices for high power heaters. Applications include temperature sensing, over temperature and over current protection and motor starting to name a few.

Products utilizing Posistors are extremely safe and reliable and offer all of the design, manufacturing, repair and sales advantages of solid state technology.

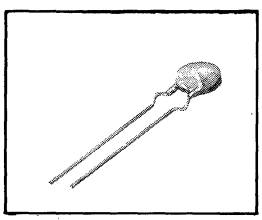
- Compact
- Reduced component count
- Extremely reliable
- "Stepless" temperature control
- Simple repair or replacement
- Long term reliability
- Shock and vibration immunity
- Nonflammable case and insulation available
- No electrical or acoustical noise
- No electrical contacts

FOR MOTOR STARTING



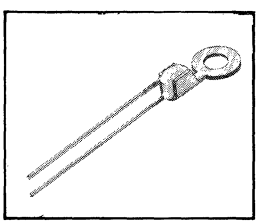
Provides a smooth, solid state electronic starting device for single phase motors utilizing a split-phase starting winding or for PSC motors as a direct replacement for starting capacitors and switches.

FOR CIRCUIT PROTECTION



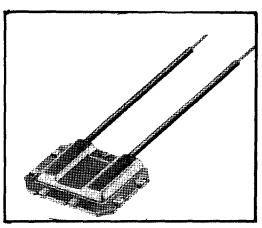
Provides overcurrent protection in a variety of applications. When connected in series with the protected device, Posistors limit the circuit current to a predetermined value — above that value they switch to a high resistance state and limit the current to a safe level.

FOR SEMICONDUCTOR OVERLOAD PROTECTION



Senses the case temperature of high power semiconductors and appropriately reduces the power dissipation when dangerous power or current levels are reached by switching to a high resistance state and reducing base bias current.

FOR HIGH POWER HEATING



Posistors for heating are self-temperature regulating with fast thermal response and power ratings to 170 watts.

NTC thermistors for temperature sensing

This series offers a wide range of resistance values and B-constants. This makes applications where temperature compensation is required, appropriate for this device.

FEATURES

- Thermally stable with consistent performance
- Highly reliable
- Appropriate for many applications

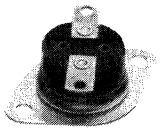
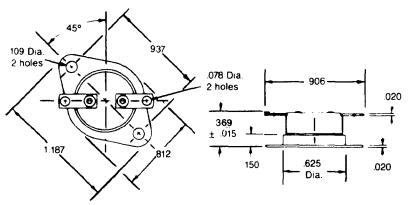
STOCK ½" DISC THERMOSTATS

SC/SO



These compact thermostats are the industry standard. As with all of our snap-action thermostats, a C in the part number means the circuit will close when the temperature rises and an O in the part number means the circuit will open when the temperature rises. Snap-action means reliability. A high-force bimetallic disc inside these thermostats keeps the circuit the way you want it. The thermostats respond instantly to temperature change—not shock, vibration or anything else.



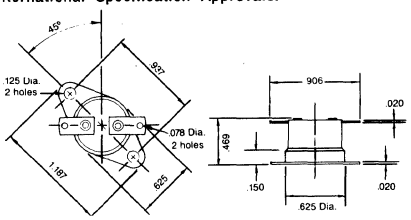
ELECTRICAL
120 VAC, 8 Amps, Resistive
100,000 Cycles
1/16" clearance through air and over surface

TEMPERATURE RANGE
32 Degrees F. to 500 Degrees F.

APPROVALS
UL File no. E36103, Guide XAPX2
CSA File No. 21048, Guide 400-E-0

SC-A/SO-A

Designed for applications requiring a higher electrical rating, our newest thermostats have the same dimensions as SC and SO thermostats, except they are .12" taller, the mounting holes are .016" larger and the bracket is .187" narrower. The slightly taller thermostat puts more space between the terminals and the base, giving the A model its higher electrical rating and all International Specification Approvals.



ELECTRICAL
120 VAC, 15 Amps, Resistive
240 VAC, 8.3 Amps, Resistive

Also has VDE and all other International Approvals

CA/OA

A breakthrough in price and technology, these thermostats perform under a wide range of operating conditions. One-piece contact construction makes the CA and OA models the most reliable in the industry. They are about the same size as the SC and SO models and are manufactured in a high-tech clean room in Japan. In fact, the CA and OA might just set a new industry standard.

Sensor Scientific has developed a low cost interchangeable wafer thermistor product line. These highly reliable units provide a resistance temperature curve that can be matched within ±.2°C over a range of 0° to 70°C. This means that a matched replacement thermistor can be purchased several years from now with the identical R/T curve as the original thermistor.

NTC THERMISTORS

TEMPERATURE ASSEMBLIES

Sensor Scientific manufactures many different types of thermistor assemblies. The housing drawings in this section are offered as a guide to assist the engineer in designing a complete thermistor assembly that meets his project needs best.

The housing material specified in most of the drawings is stainless steel. If the requirements are such that other material would be preferable, brass and aluminum are also available.

The basic element in these assemblies is the thermistor. Sensor Scientific manufactures a complete line of thermistors. The glass bead probe thermistor and the wafer or thermistor are units that are typically used in these assemblies.

Sensor Scientific has trained application engineers who will assist you in the design and selection of the thermistor assembly that meets your needs best. Our probes have been designed to maximize sensitivity and stability. They are also constructed to minimize the risk of damage due to operation and handling.

All assembly work is performed by carefully trained and supervised individuals. All units are extensively tested throughout the manufacturing process to insure that customers receive the highest quality thermistor assemblies.

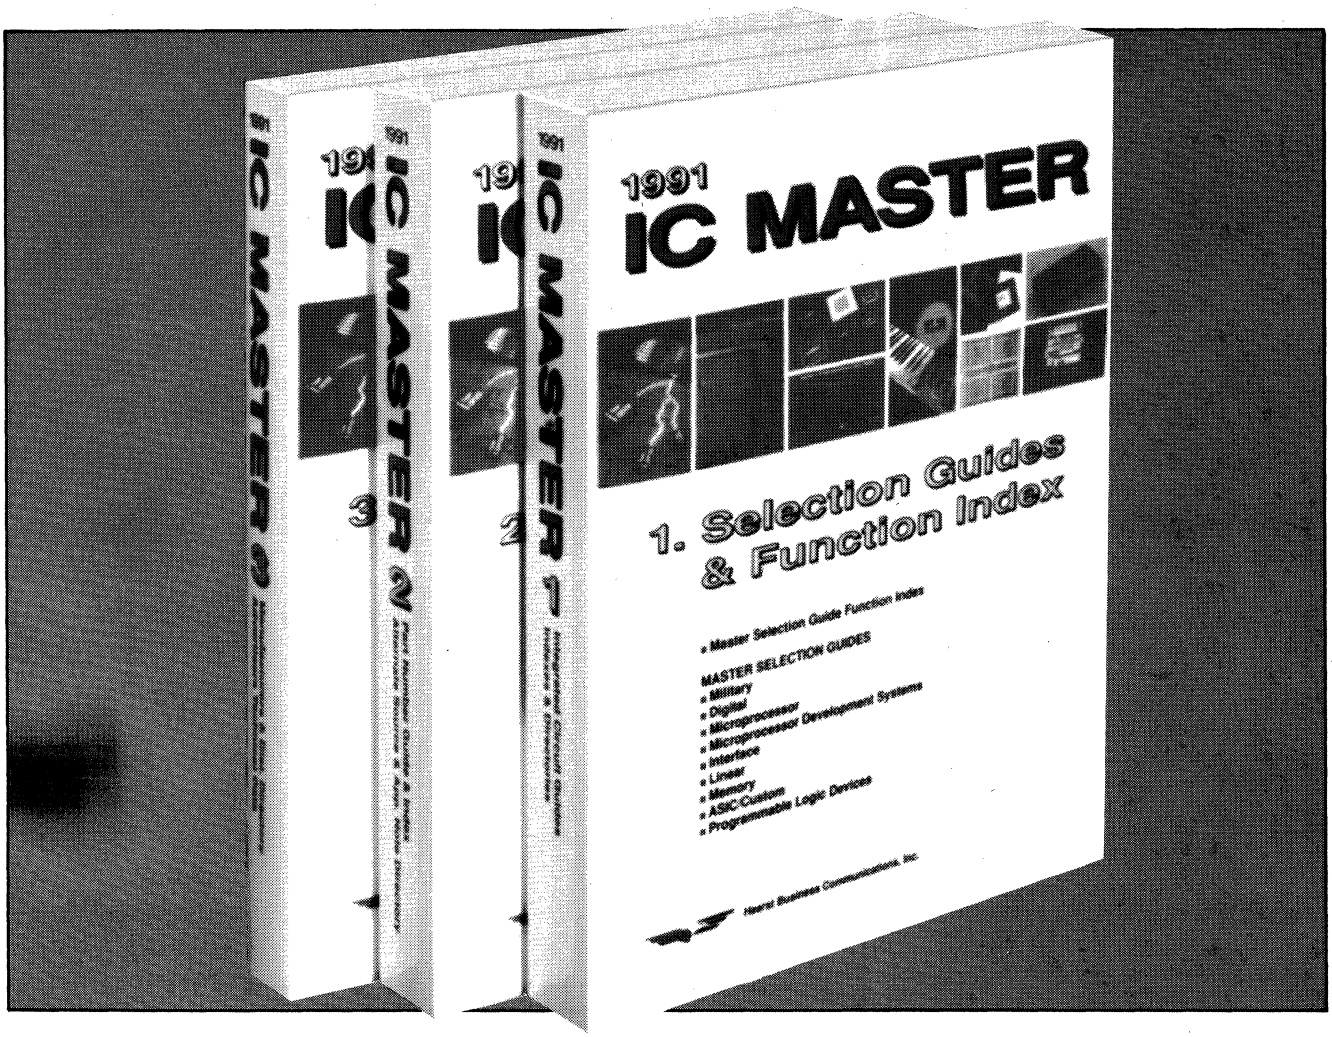
SUPER TIME SAVER!



Do you work with ICs? Do you have trouble finding the IC you need? Are you sick and tired of sifting through dozens of manufacturers' data books? Do you have trouble comparing one set of specs to another? Are you sick and tired of wasting time?

Do we have good news for you! Get your hands on the latest annual copy of the IC Master. The Master will save you both time and money. Here's how.

The Master lists every single IC you can buy. Better yet, the Master lists ICs by function. You know what you want to do. The Master tells you who makes what for what you want to do.

There's more! The Master lists every known alternate source to every integrated circuit. If somebody makes a substitute for an IC, the Master tells you. And fast!

Want to find a custom or semicustom IC? The Master tells you who the manufacturers are, what their capabilities are, and what design tools you need.

Looking for a distributor or a local sales office? The Master tells you where they are. Got a technical problem? The Master tells you who to call. Can't figure out a part number? The Master tells you how the part number systems work.

There's more! The Master has a section on microprocessor development tools with complete performance parameters. There's another section on programmable logic devices giving you everything from output configuration to PLD development systems.

Want to know if there's an application note available on a given part? The Master tells you!

If your question has anything to do with integrated circuits, you need the IC Master. Subscribe now by calling (516) 227-1314. Ask for Marie Botta. Tell Marie you need the Master now.

If you prefer, write to Marie, Hearst Business Communications, 645 Stewart Ave., Garden City, NY 11530. She'll mail you the IC Master subscription form right away.

And, if you tell her you saw it in the 1991/92 EEM, she'll take $10 off the subscription price!

TEMPERATURE CONTROLS

Product Overview

Therm-O-Disc bimetal disc temperature controls are widely used in the appliance, HVAC and many other industries. They are powered by bimetal discs which open or close a set of electrical contacts when a predetermined temperature is reached.

Therm-O-Disc temperature controls combine reliability and performance with high volume production methods for maximum value at a low cost. Many terminals and mounting arrangements are available for application flexibility. These products are approved by most major testing agencies around the world.

In addition to the products shown, Therm-O-Disc offers a variety of other products designed to meet unique applications. We have the expertise and experience to custom design products to meet your application for temperature sensing and control, electric power control, water flow control and pressure control.

This chart contains an overview of some of the most widely used Therm-O-Disc products. Products with similar attributes are grouped so you may compare their features.

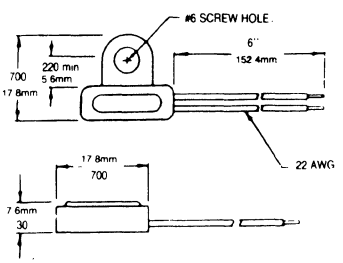
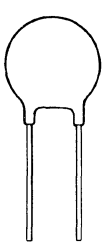
TAB MOUNTED PROTECTORS

Over Temperature Protectors provide shutoff or regulation of expensive Power Transistors and protect against over-heating that occurs from component failure or short conditions. The sensor is an NTC (Negative Temperature Coefficient) device. Unlike fuses or bi-metal elements its action is recyclable and has no hysteresis effect. Available in resistance packages from 100Ω to 100K in tolerances of .8% to 40%.



INRUSH CURRENT SUPPRESSORS FOR SWITCHING POWER SUPPLIES.

Switching power supplies present high initial currents due to filter capacitor impedance upon turn-on. The use of NTC (Negative Temperature Coefficient) devices limits this current to a low value. After current flow their resistance becomes negligible and offers little voltage drop.



• TEMPERATURE COMPENSATION AND SENSING

Disc Series Thermistors are small rugged Thermistors with close electrical tolerances. Their small mass gives short thermal time constants, yet they are not so small that it is difficult to handle them. The tinned copper leads are easily soldered into electrical circuits.

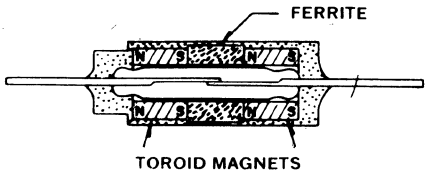
TEMPERATURE SENSING SWITCHES

CONVENIENT AND RELIABLE TEMPERATURE CONTROL

Miniature temperature switches use an electro-ceramic element instead of a bimetallic switch. The Reed Switch Temperature Sensor works on these two principles: a reed switch actuation occurs because of changes in strength of a magnetic field in the vicinity of the contact gap; and certain materials exhibit great changes in magnetic reluctance when the temperature is varied in the vicinity of the material's curie temperature.

The unit has good response time, and is operable in a variety of atmospheres and solutions. Variations in configurations suitable for installation in automotive engine crankcases and automatic transmissions, or mountings for use in computer cabinets are possible. Other applications include oven over-heat alarms, corrosive liquid temperature control, food freezer thaw warning and cooling fan stop indication. This switch replaces many thermally actuated devices now used where increased life is required or protection of the switching contacts from adverse environments is deemed desirable.



MOLDED SWITCHES

Switches feature small size for fast response. epoxy package resists most chemicals and is good for use up to 115°C. Standard units from 0° to 115°C are available in five degree nominal increments.

SNAP-ACTION BI-METAL SWITCHES

The electrical switch of the SAS is operated by a thermally-responsive ½inch diameter bimetal disc. The switch is used as a temperature limiting or regulating thermostat. Because of its relatively small size and inexpensive design, it is suitable for a vast array of applications.

Features

Impact Action: The bimetal disc of the SAS is factory calibrated at both its top and bottom temperatures. When the disc, which is dished like a saucer, reaches its calibrated temperature it suddenly snaps through and imparts its kinetic energy to the bumper, then to the contacts. The resulting high speed of contact separation insures long life at high electrical loads, and a minimum of radio and TV interference.

SPECIALTY CERAMICS

SELF REGULATING DISPLAY HEATER

The unique self-regulating heating effects of specially doped ceramics are utilized to create a new type heater for liquid crystal or other temperature sensitive displays. These devices produce heat at cold temperatures and curtail heating at normal or high temperatures. This feature allows its use in battery operated instruments due to low normal current drain. Use of this heater allows a broader application of displays by removing the adverse effects of temperature.

Heater is attached to reverse side of display with thermally conductive epoxies or silicone adhesives depending upon display's thermal coefficient of expansion or temperature to which it may be subjected. Actual performance of the display will depend upon manufacturers specifications.

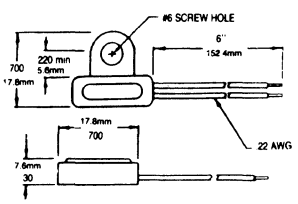
POSITIVE OVER TEMPERATURE PROTECTORS

Therm-O-Discs' Over Temperature Protector provides shutoff or regulation of expensive RF or AF Power Transistors. Protects against over heating that occurs from output stage component failure, antenna breakage, or short conditions.

Unlike fuses or bi-metal elements its action is recyclable and has no hysteresis effect.



PTC SWITCHING THERMISTORS

THE POSITIVE WAY TO SENSE, MEASURE, CONTROL, REGULATE AND PROTECT.

PTC switching thermistors are thermally sensitive resistors which exhibit large positive increases in resistance with temperature. At customer specified temperatures the resistance rises abruptly from a low value to a high value. This resistance shift is infinitely repeatable and has no hysteresis associated with its action.

C-8 SERIES AMBIENT TEMPERATURE SENSORS

C8 Sensors are based on a differential expansion principle, comparing the expansion or contraction of the outer shell in relation to an internal member that is not affected by temperature. The differential in expansion of these two members is then multiplied by the internal mechanism and transferred as a motion to the contacts. The contacts are built in a separate fused glass header with a minimum current path to reduce self-heating effects.

INRUSH CURRENT LIMITING POWER THERMISTORS

U.S. Sensor's inrush current limiting power thermistors are specially formulated and processed NTC thermistors suitable for suppressing high inrush currents in switching power supplies and other applications where the high initial starting currents are undesirable. Their unique design enables them to handle extremely high current and voltage levels. In a typical power supply application, the device is used in series with the filter capacitors. Upon application of the initial voltage, the device, due to it's relatively high resistance, limits the current flow to an acceptable level until the capacitors are charged. Thereafter, the device decreases in resistance substantially to a level where the voltage drop across it is negligible.

Tachtrol® 2—Speed/Rate Monitor

A single input digital instrument, this speed/rate monitor offers fast-response, high-precision monitoring. Measured values are displayed in engineering units: RPM, FPM, frequency or other values. Rugged, easy to set up, yet costs less than competitive models.

Features:

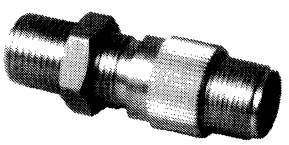
- Single-channel precision speed or rate monitoring.
- Period mode measuring system.
- Five-digit auto-ranging .56" LED display; full or partial auto-ranging with leading zero suppression. Updates twice per sec.
- Active or passive sensor input; accepts any pulse output device, magnetic digital speed sensor.
- Meets MIL-810C shock and vibration.

Tachtrol® 3—Dual Input Digital Tachometer

Single or dual channel instrument, this computing tachometer measures input frequencies and displays the resulting quantities in RPM, FPM, % Draw and other rates. A unique method of setting conversion factors and instrument functions allows easy configuring or altering at any time.

Features:

- Measures speed or frequency (2 Hz to 30,000 Hz).
- Active or passive speed sensor inputs.
- Auto ranging LED display.
- Meets MIL-810C shock and vibration.



70084-1713-111 Low-Cost Molded Magnetic Speed Sensor

Stainless steel housing and one-piece construction, this speed sensor has interior section coated with epoxy resin to resist both oil and moisture.

Features:

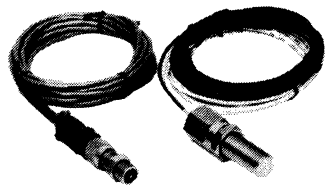
- Wide operating and storage temperature range: - 40°F to 300°F
- I90-volt minimum output (P-P).
- Mates with MS3106A-1OSL-4S.

Tach-Pac® 3

The single channel, microcomputer-based Tach-Pak®3 uses adaptive period averaging which permits a combination of fast response and high accuracy. It measures input frequency and converts the resulting quantities to a meter output, an analog output, and four relays. A unique method of setting instrument functions permits them to be easily configured or altered in the field at any time.

Features:

- Measures frequency from .0625 to 30,000 Hz.
- Active or passive sensor inputs: accepts input from any frequency source.
- Response time—50 millisecond updates above 100 Hz.
- Field programmable.

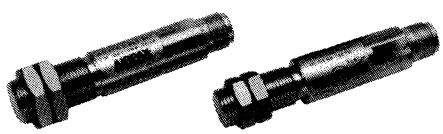


7085-1010-001 & 085-101-0005 Passive Magnetic Speed Sensors

Convert mechanical motion to AC voltage. The frequency of the AC signal is exactly proportional to the speed or RPM.

Features:

- No moving parts.
- Wide temperature range.
- Stainless steel housing.
- UL/CSA and FM listed, intrinsically safe sensors available.



70087-3040-070 & 087-304-0036 Active Magnetic Speed Sensors/Zero Velocity

Either speed sensor can be used to sense the speed of any rotating machinery, including motors, generators, turbines, compressors, conveyors—wherever speed or RPMs need to be monitored.

Features:

- Low cost.
- 12V ± 2VDC power supply.
- - 25°C to + 70°C operating temperature range.
- 087-304-0036 is UL listed.
- DC to IOK Hz frequency.
- UL/CSA listed sensors available.

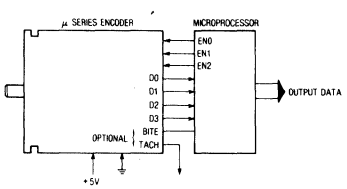
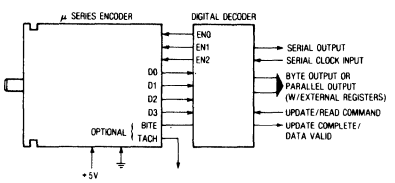
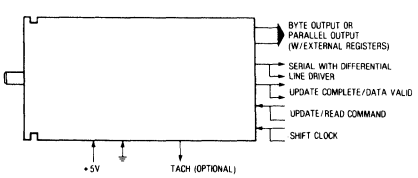
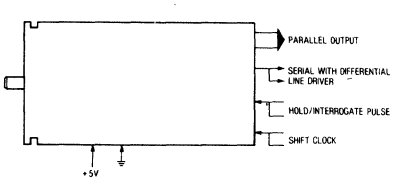
VERSATILE INTERFACE









L MODEL

The L model is the basic encoder configuration which outputs a 4 wire multiplexed, 3-State Logic Level MicroSeries Code Word. the encoder is addressed by 3 Enable Lines activated in a controlled sequence. This model is intended for direct interface with a user (or Itek) furnished microprocessor where the microprocessor can be programmed to perform the encoder's digital logic functions.

LS MODEL

The LS model consists of the basic L encoder (described above) and a separate Digital Decoder. The use of the external Digital Decoder is suggested when the user does not have a microprocessor available to perform the digital processing of the outputs of the L Model encoder or when the length of the LC encoder exceeds available space in the intended application. The external digital decoder also affords the user the flexibility to access the various input/output programming modes available with MicroSeries encoders. The Digital Decoder can be user programmed for three output modes: serial, 8 bit bytes, or parallel with strobe signals to latch user supplied external registers. Additionally, two data acquisition modes are possible: Update and Read.

LC MODEL

The LC Model contains an Integral MicroSeries Digital Decoder Chip. This model, essentially similar to the LS, is appropriate when an encoder without external processing circuits is desired. The same output and data acquisition modes as the LS Model are available but are built in at the factory for the LC Model.

K MODEL

The µS/23K Model encoders are *low cost* absolute encoders which provide 12 or 13 bits resolution with either parallel or serial output. In the parallel output mode all bits are continuously available. The HOLD pulse prevents any bit from changing state while the encoder is being read. In the serial output mode the user provides an interrogate pulse which provides the hold function and loads the shift register. Shift (clock) pulses provided by the user serially shift out the stored information.

DESCRIPTION

The F.W. Bell series of Hall effect magnetic field sensors consists of 29 standard models designed to meet the requirements of most magnetic field measurement applications. The sensors are small, solid-state devices. They produce a voltage which is proportional to the product of the control current and the magnetic field component normal to the Hall active area. Each unit has four electrical connections. Two carry the control current (I_C) and the other two supply the Hall voltage.

These models are built in various configurations to measure axial, transverse, and tangential magnetic field components. Their operating characteristics permit virtually any application: frequency, dc to MHz; magnetic flux density, milligauss to kilogauss; linearity to 0.1%; temperature, -269°C to +100°C.

This schematic representation illustrates both the measuring and multiplying capabilities of a Hall generator. By holding I_C constant, V_H becomes a direct function of B, the magnetic flux density. If both, I_C and B are variable, V_H is proportional to the product of the two functions. Holding B and I_C constant, V_H becomes a function of the angle between B and the plane of the Hall-generator active area.

Special units are available to fit your application.

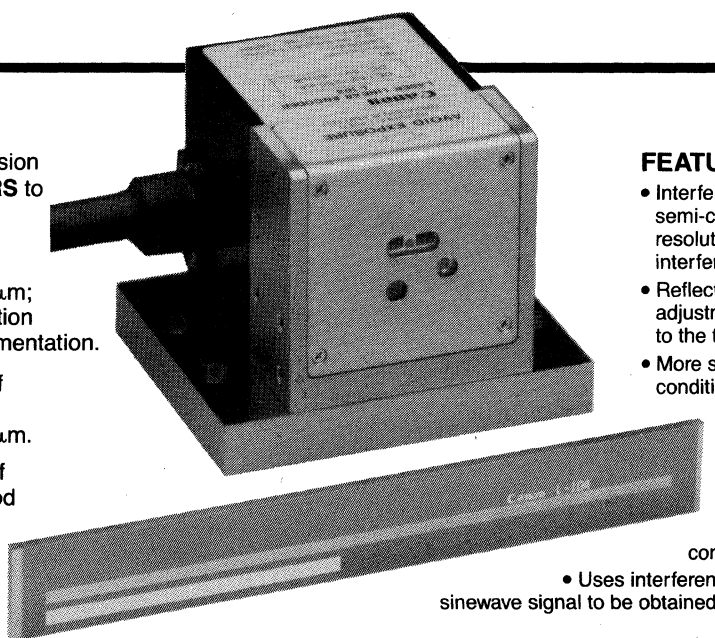
Canon Laser Linear Encoders

0.01μm RESOLUTION. EVEN IN THE REAL WORLD.



Canon has added high-precision **LASER LINEAR ENCODERS** to its full line of laser rotary encoders. The Canon laser linear encoder provides for maximum resolution of 0.01μm; thereby allowing high resolution closed loop control of instrumentation.

L-104 has a scale slit pitch of 1.6μm and sinewave period output from main unit of 0.4μm.

L-108 has a scale slit pitch of 3.2μm and a sinewave period output from main unit of 0.8μm.

A 16 signal interpolator CI16-2 and 40 signal interpolator, CI40-2 are available, enabling optimum combinations to achieve various resolution and responsiveness.

FEATURES:

- Interference by fine grating with a semi-conductor laser achieves resolution equal to that of laser interferometers.
- Reflection-type, allowing easier adjustment of alignment as compared to the transmission type.
- More stable under variable ambient conditions compared to conventional laser interferometers due to the use of a scale method instead of the laser wavelength standard method.
- Zero-phase index signals are output, allowing simple control of positioning.
- Uses interference, thus providing a full sinewave signal to be obtained from the photodetector.

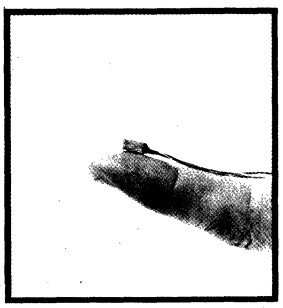
EGA-125-D Miniature Accelerometers



Entran's EGA-125-D accelerometers are a state of the art achievement in miniature design. The EGA offers an optimum combination of characteristics which permit acceleration, vibration and shock measurements where small size and mass are of prime importance. 0.7 cr. nom. damping increases useful range to as high as 50% of resonance with overrange at all frequencies. Functions both steady state and dynamic. Two mounting styles in stock.

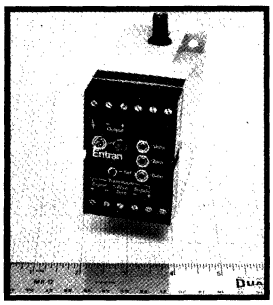
PS Series Transducer Power Supplies with Amplifier Option



Entran's new PS Series Power Supplies are a general purpose excitation source for strain gage bridge transducers and companion amplifiers. The PS Series is an ideal accessory for Entran accelerometers, pressure transducers, and load cells, as well as most standard bridge transducers on the market. Available in single and dual adjustable excitations or with a built-in adjustable gain amplifier, accepting 4-wire closed bridge or 5-wire open bridge configurations. The PS-15 is a single polar supply, the PS-30 is bipolar supply for use with external amplifiers requiring plus/minus excitation and the PS-30A features a built-in instrumentation amplifier. Any PS Series supply or amp can be used with the MM45 meter but use with the MM35 requires factory matching.

OPERATING PROCEDURE

1.) If desired, link the "E-Ground" to "C-Common" terminal on PS-30 or to "Output—" on PS-30A and to "Supply—" on PS-15 for non-isolated operation. Power unit through wall plug, turn on front panel switch, red light should activate.

2.) For PS-15: Connect DVM to Transducer "Supply+" and Transducer "Supply—" terminals and adjust "Volts" potentiometer for desired transducer excitation voltage. For PS-30: Connect DVM to Transducer "Supply+" and "C-Common" (use "Output—" on PS-30A instead of "C-Common" terminal) and adjust "Volts" potentiometer for desired transducer excitation voltage (both+ and —voltages will be adjusted by this action). Move DVM to "Supply—" from "Supply+" to confirm correct voltage on "—" side.

3.) Connect transducer excitation leads to appropriate "Supply" terminals. Confirm that loaded power supply is providing desired voltage with DVM and fine adjust the "Volts" potentiometer if necessary.

4.) WITH STANDARD 4 WIRE BRIDGE TRANSDUCERS: Connect the transducer signal leads to "Signal+" and "Signal—" terminals.

5.) FOR 5 WIRE OPEN BRIDGE TRANSDUCERS (available from Entran): Connect the "Green+" output lead to the "Signal+" terminal and the "Blue+" output lead to the "5 Wire Zero" terminal. This will activate the "Zero" control potentiometer providing 50 Ω zero offset adjustability. Connect the "White—" lead to the "Signal—" terminal.

6.) Connect the "Output" terminals from the front panel to your monitoring or recording equipment.

7.) Adjust the "Zero" potentiometer for "5 Wire" connected transducers to trim the output offset.

8.) FOR USE WITH SEPARATE EXTERNAL AMPLIFIER ON PS-30 ONLY (such as Entran IMV): Connect the amplifier to the "Supply+", "Supply—" and "C-Common" terminals. Power the transducer from IMV or amplifier. Connect "+" output lead from the IMV or amplifier to the "Signal+" terminal and connect the "C-Common" lead to the "Signal—" terminal.

9.) TO SET GAIN OF PS-30A AMPLIFIER: With the transducer supply leads connected to the PS-30A, but before connecting the transducer signal leads, set the gain by utilizing the "SET" button and "GAIN" potentiometer. Determine the Amplifier Output offset by temporarily linking the "Signal+" to "Signal—" terminals and recording the "Output+" to "Output—" voltage. Remove "Signal+" from "Signal—" and connect to "Output—", press/hold the "SET" button. Monitor the test signal (approximately +50mV) which has been internally injected to the "Signal+" and "Signal—" terminals. Then monitoring the amplified test signal at the "Output+" and "Output—" terminals, and subtracting the amplifier output offset to provide the net amplified output, adjust the gain to the desired value with the "GAIN" potentiometer, comparing the net Amplified Output signal to the unamplified test signal on the "Signal" terminals. To confirm and fine adjust the desired gain, re-connect the signal input link and repeat the above procedure until the desired accuracy is achieved and confirmed. After gain is adjusted, release the "SET" button, remove signal link and connect the signal leads of the transducer to the PS-30A.

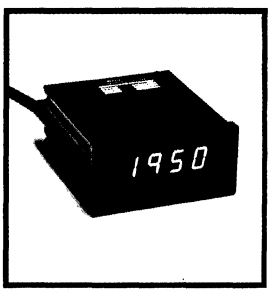
Low Cost Digital Transducer Meters

WITH BUILT-IN TRANSDUCER POWER SUPPLY

MM35 Series



The MM35 and MM45 Digital Transducer Meters have been manufactured for Entran to complement our line of pressure sensors and load cells, as well as most other sensors on the marketplace. They are both easy and simple to use and in addition to their digital display, provide various levels of excitation so that a transducer can be powered directly from the meter, without use of an external power supply. This is a powerful combination not usually found in digital meters. The MM35 has a 3-1/2 digit display. Its 1999 count can be fully utilized with any input between 1mV/V and 20mV/V and it has two standard transducer excitation voltages. The MM45's 4-1/2 digit display with 19999 counts, can be fully utilized with either a ±200mV or ±2V input signal, and is totally pushbutton programmable from the front panel. It has five standard excitation voltages, selectable by internal connector pins.

The heart of all Hamlin magnetic proximity sensors is a hermetically sealed reed switch, for environmental integrity and dependability. When a magnetic actuator is placed within a prescribed proximity of the sensor, the switch contact changes state. Their cost is far below inductive or capacitive proximity sensors. They require no power to operate and provide a switch closure output.

HERMETIC SWITCH, INC.

Proximity Sensors

Hermetic Switch, Inc. manufactures a variety of two part magnetic proximity sensors (sensor and actuator). All sensors feature hermetically sealed reed switch contacts that can survive harsh environments. Specially selected epoxy potting materials and rugged plastic cases withstand the impacts and forces of the real world. Many models are listed with Underwriters Laboratories, verifying that they have passed rigorous testing. The sensors listed in our catalog are designed for use in alarm systems, automotive, consumer products, industrial controls, safety interlock, and many other applications. Custom sensors not shown in our catalog may be required for your application. Consult factory for complete operate data, catalogs, and engineering assistance.

Solid State Hall Sensors

Hall effect sensors respond to a magnetic field, or—in the case of Hall vane sensors—to the interruption of a magnetic field. Hall sensors are not rate sensitive. They operate at extremely high speed and include signal conditioning. They offer high reliability, long life, and compatibility with microprocessors and other electronic circuitry.

Sensors are used in:

- Ignition systems
- Brushless DC motors
- Utility meters
- Water softeners
- Gasoline pumps
- Welding equipment
- Balance scales
- Interlocks
- Flowmeters
- Magnetic card readers
- Vending machines
- Home appliances
- Computer equipment
- Medical instruments
- Copy machines
- Laboratory equipment

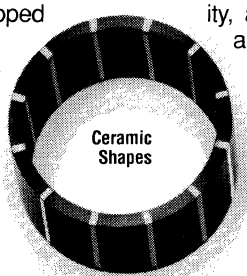
Electronic components and piezo ceramics. Over 50 years of innovation.

Design Engineers can rely on us to produce a complete line of standard and custom piezo ceramic shapes for a variety of commercial, industrial and military applications.

We've been making innovations in electronic components and piezo ceramics since 1938. And we're still doing it. Take a look at some of our accomplishments in modern ceramic shapes. We've developed discs, blocks, rings, plates, cylinders, tubes and many custom shapes for sonar use, as ultrasonic, hydrophonic, and as torpedo transducers, and in accelerometers and high voltage generators.

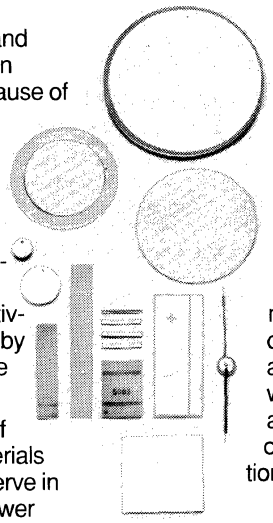


Ceramic Shapes

Our PZT®-4 is recommended for use in high voltage generators and high power acoustic radiating transducers because of its ability to withstand high levels of electrical excitation and mechanical stress.

PZT-8 was developed to provide a material with the ultimate in power handling capability. This composition has reduced piezoelectric activity at low to moderate excitation levels.

PZT-5A is recommended for use in receiver or generator type transducers such as hydrophones, fuses, accelerometers, and vibration pickups in general, etc., because of its high sensitivity, permittivity and time stability

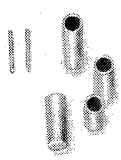


PZT-5H is better suited to low frequency applications because of increased permittivity, accompanied by a reduced Curie point.

The family of PZT-5 materials may also serve in very low power motor-type transducers because of high motion sensitivity.

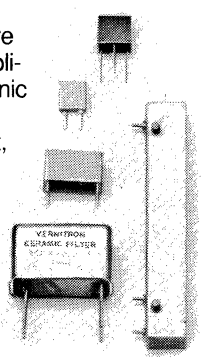
We've also developed lead metaniobate materials, PMN-1 and PMN-2, for diverse applications that feature higher Curie points. And, we are the originators of Unimorphs and Bimorphs to serve as compact transducers for audio tones.

Unimorphs, Bimorphs



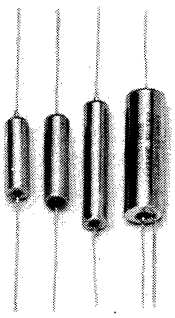
Ink Jet and Ceramic Tubes

Bandpass Filters and Resonators



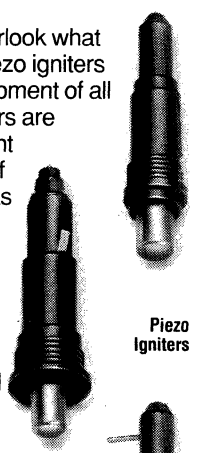
The above compositions are used in such applications as ultrasonic cleaners, kidney dialysis equipment, heart pacemakers, ink jets, ultrasound scanners, gyros, sonobuoys, automatic erasers and a variety of noisemakers. Also in laser positioning and as motion sensors.

Innovation is also our "hallmark" in bandpass filters, ladder filters, and ceramic resonators. We offer light weight, stable, fixed tuned, miniature ceramic filters and resonators with varieties for almost any kind of communications equipment: consumer— commercial— military.



Ceramic Ladder Filters

And don't overlook what we've done in piezo igniters for gas fired equipment of all types. Our igniters are original equipment in many makes of barbeque grills, as well as in furnaces, water heaters and camping lanterns. Our igniters are the industry standard worldwide.



Piezo Igniters

So if you're working with piezo ceramics, in alarms, speakers, lasers, sonar, ink jet printing data processing, communications, telephone development, gyros, or hydrophones, pacemakers or gas-fired equipment, give us a call and put our 50 plus years of innovation and experience to work.

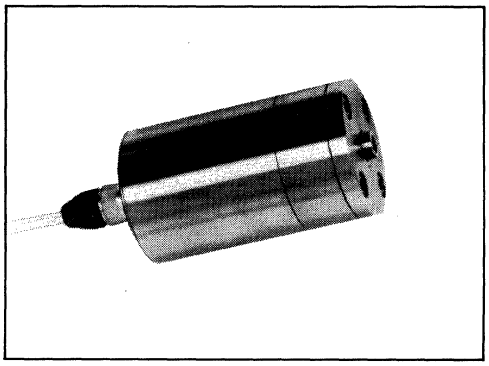
TRANSDUCERS & SYSTEMS

Specialists in transducers and systems for low range force/weight measurements

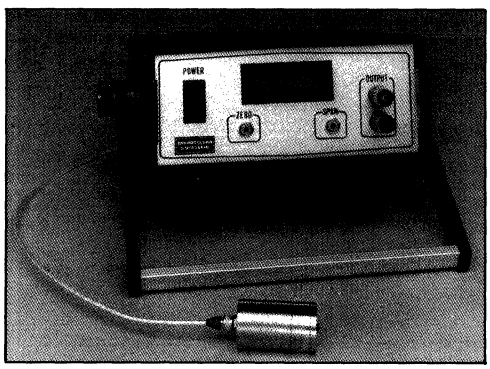
A PRIME TECHNOLOGY COMPANY



LOW RANGE FORCE/WEIGHT TRANSDUCERS

- **Highly repeatable — .02% F.R.**
- **Frictionless sensing**
- **Virtually indestructible**

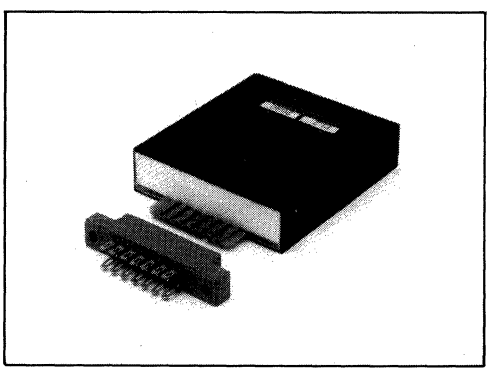
A virtually indestructible frictionless spring-loaded design has been proven in a wide range of applications — from demanding high volume arm flexture gram force calibration for disk drive manufacturers where durability and dependability are required . . . to sophisticated medical laboratory developments where pinpoint accuracy and precise repeatability are a must.



SIGNAL CONDITIONING CONTROL BOXES

- **Push-button Zero**
- **4½ Digit Display**
- **Span Adjustment**
- **AC Power Line Operation**

The CB14 control box is a highly flexible bench-top AC line-operated system. A 4½ digit LCD indicator and standard calibrations give a direct visual representation of measurement in grams of force or inclination related to the sine of the angle. Front panel accessible offset and scale potentiometers allow adjustment of any deviation experienced through mounting.

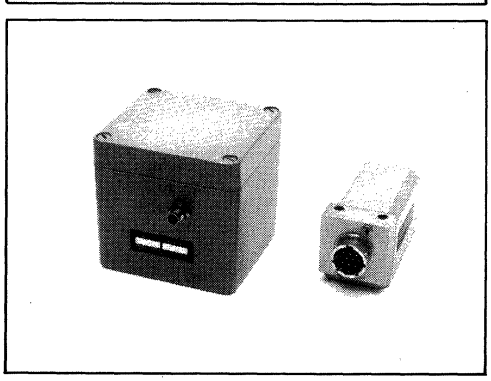


SIGNAL CONDITIONING MODULES

- **Flexible**
- **High resolution output**
- **Designed for use in existing OEM applications.**

These EL Series modules eliminate the need for developments of custom circuitry where DC to DC operation is desired. They provide a carrier-oscillator-demodulator filter and amplifier to provide a sharp, high resolution output. The unique EL2 has provision for remote offset and scale potentiometers as opposed to the more conventional EL3 with on-board adjustments.

Note: AC line, cord-operated, ±15VDC output power modules are available for use with EL2 and EL3 units.



INCLINOMETERS

- **From ±5° to ±90° with 360° axial capability**
- **Resolution of 0.1 arc-second**
- **Fast response, low hysteresis, high stability, high accuracy**

The HO Series of inclinometers utilizes a frictionless assembly for measuring deviation from horizontal, with immediate response, virtually infinite resolution and no cross-axis sensitivity. It is an LVDT-based spring mass system with core material centered on a non-magnetic stainless steel shaft with two mass weights equidistant on either end. The HO-C Series is a more moderately priced alternative to the HO inclinometer that meets the performance standards of most applications.

SP-16 Softpot

Optical Shaft Encoder

The SP-16 is a very rugged, reliable, low cost optical incremental encoder that converts shaft angle, speed and direction into realtime digital information.

Placed behind a knob on a front panel, the SP-16 offers these advantages over other types of man-to-machine interfaces: Direct rotary to digital conversion with no digit bobble, no contact wear and no mechanical stops. Software limits can be defined by the system designer. No gearing is required for multi-turn operation.

Available with ball bearings for motion control applications or torque-loaded to feel like a potentiometer for front-panel manual interface.

Two quadrature outputs provide 64 codes per revolution (16x4). TTL compatability is achieved by feeding the outputs through an external 74LS244. The internal electronics and LEDs draw less than 27ma from a single +5V supply.

Absolute Optical Shaft Encoder

Preliminary

This addition to the optical encoder family reports the realtime absolute shaft position. The absolute encoder disk and module is designed to fit into the SP-500, SP-1000 and E2 packages specified on the preceding pages.

Features:

- Absolute position is not lost after power down.
- No need need to "find home".
- Small size
- Low cost
- Tracks from 0 to 50,000 codes/sec
- -40 to +100°C operating temperature
- Single +5v supply
- The absolute position is represented by a parallel binary word which increments for clockwise rotation and decrements for counter-clockwise rotation. The binary code rolls-over for each full revolution.
- Standard resolutions of 100 and 128 CPR are available with a 1 inch wheel, and 100, 128, 200, 256, 360 and 400 CPR with a 2 inch wheel.
- Any special resolution (1-150 cpr with a 1 inch wheel) and (1-400 cpr with a 2 inch wheel) can be provided typically in 1 week.
- Accepts ±.010" axial shaft play

Support Chips

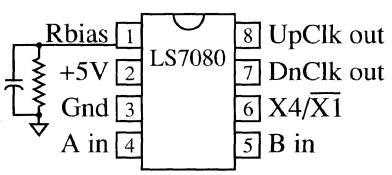
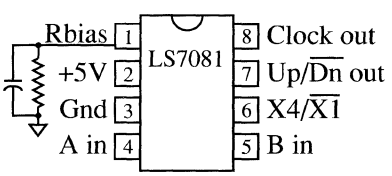
Features:

- X4 or X1 mode selection
- TTL and CMOS compatible
- Low power (micro-amps)
- Low cost ($2.00/100's)
- 8-pin DIP package
- No external clocks required
- Drive standard Up/Dn counters





Three types of incremental encoder to micro-processor interface chips are also available from stock.

Features:

- 16 or 20 pin DIP package
- Schmitt trigger inputs
- Digital noise filter
- X4 resolution multiplier
- 8, 12 or 16 binary up/down counter
- HCTL-2020 is 16-bit cascadable
- Latched outputs with inhibit logic
- 8-bit tri-state data bus
- 5 micro-amp quiescent current
- External clock required

ICMASD...IC Alternate Source Directory

The all new 1991 version of the world famous Alternate Source Directory is now available in floppy disk form for your IBM XT & AT and 100% compatible personal computer with hard drive.

The **1991 ICMASD** contains the more than 180,000 listings that appear in the Alternate Source Directory Section contained in Volume Two of the printed version of the 1991 IC Master ...plus additional discontinued parts. The database includes complete vendor addresses and phone numbers.

You can personalize the **ICMASD** for your application. The program allows you to add comments, up to 20 digits long, to each listing. These comments can be part numbers, prices, or any information specific to your needs. You may also add, delete and/or discontinue devices!

For greater flexibility the base number search feature enables you to access parts by base number, i.e., the device number stripped of prefixes and suffixes. You don't need to know the manufactures codes to call up any of the alternates to these devices.

The **1991 ICMASD** is fast, convenient and very user friendly!

Complete program documentation is included. When ordering, be sure to specify if you want the **1991 ICMASD** on three, double-sided, double-density disks OR on one high-density disk.

For immediate delivery you can order the **1991 ICMASD** at $179.50* simply by charging your Visa or MasterCard credit card. To place your order or for more information, call or write:
